**Water Reuse Policies
Advancement for
Resource Efficient
European Regions**

ABOUT AQUARES

The AQUARES project brings together 10 public organisations from 9 different European countries with the aim to achieve better water management of water resources through water reuse.

Project efforts will focus on:

- Identifying viable water reuse strategies to confront inefficient uses of water.
- Securing the protection of water bodies.
- Taking advantage of untapped EU financing tools.
- Promoting public dialogue to address conflicting interests in the water reuse sector.

WATER REUSE IN THE EU

One third of the EU territory is experiencing water stress due to the growing needs of populations, climate change, and over-abstraction. Water reuse can be a key way to promote resource efficiency in areas of Europe with water scarcity, to profit from opportunities in the expanding water market, and to alleviate the pressure on European water resources.

BENEFITS FROM THE PROJECT

STAKEHOLDERS

Stakeholders will be actively involved in the project implementation through participation in regional meetings, interregional workshops, networking, awareness raising and public dialogue events.

PUBLIC AUTHORITIES

Public authorities will improve the implementation of regional development policies and programmes regarding water efficiency, generating green growth opportunities and jobs for businesses.

GENERAL PUBLIC

The project will increase awareness and consensus building among water providers, the workforce, and citizens in issues of water reuse, helping in mitigating conflicts.

AQUARES is an Interreg Europe project and receives funding from the European Regional Development Fund. The project duration is 5 years.
