Why a green spatial plan?

Development vision of the city

Timely preparation for future obligations in the energy transition and climate adaptation areas

City of Karlovac – green, healthy city with high quality of living

KARLOVAC
grad susreta

1

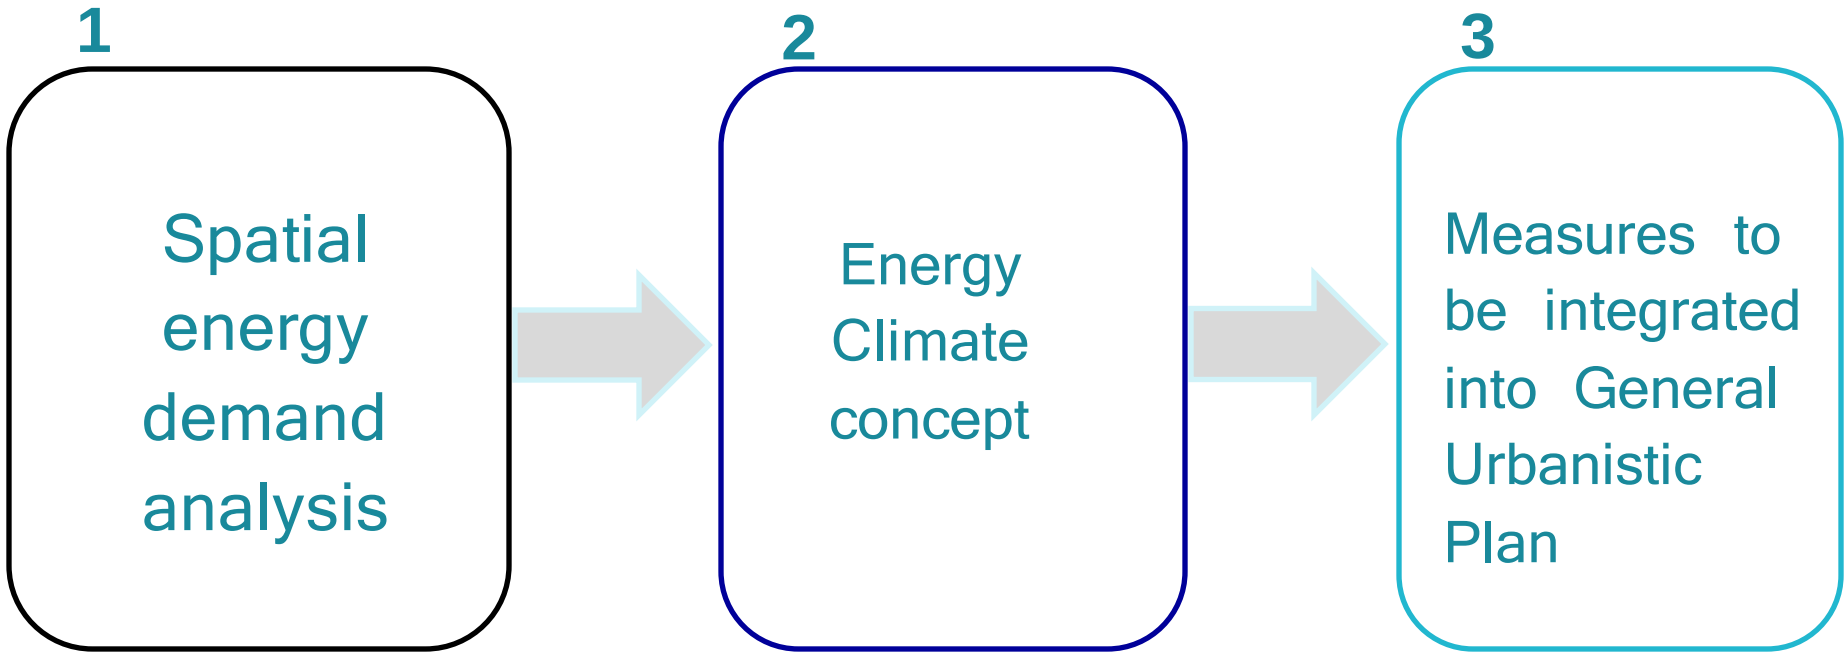
Development of **Guidelines for integration** of sustainable **energy planning** and **climate change adaptation** into General Urbanistic Plan

2

Integration of **measures** identified in Guidelines into General Urbanistic Plan

3

Formal process of General Urbanistic Plan **approval by the City council**



1
Spatial energy demand analysis
2
Energy Climate concept
3
Measures to be integrated into General Urbanistic Plan

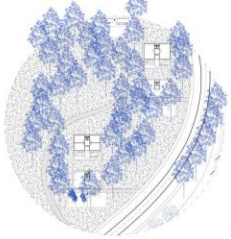
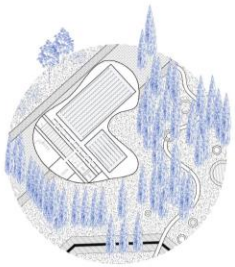
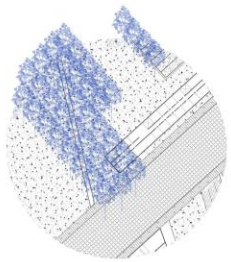
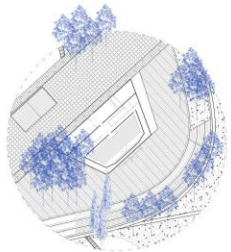
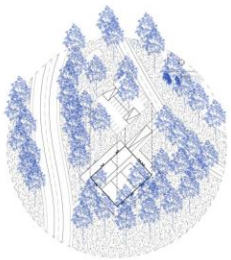
Sub-urban spatial plan for the regeneration of zone “Luščić”











Juxtaposition of Zvijezda and Luscic: ideal VS. real, old VS. new, spending VS. making money, dull VS. vibrant

Luscic ecosystem: designing living cycles, processes and flows

A new arena for research, experiment and imagination

Forest perimetre with housing towers and a central clearing with public spaces / facilities

- **Spatial planning should be seen as a tool for decarbonization of urban areas**
- **Key stakeholders must be included in the process from the start**
- **Measures from SECAPs and similar documents need to be integrated into spatial plans and later in budgetary plans – monitoring required**
- **Energy transition and climate related actions are drivers for innovation and economic development**
