

Project results

During the lifetime of the project, INNOTRANS will deliver:

- > Transport Innovation Frameworks Report
- > Good Practice Handbook
- > Five Regional Policy Recommendations
- > Joint Policy Recommendations
- > Five Regional Action Plans
- > Joint Action Plan

Project partners

1. Coventry University Enterprises Ltd (*United Kingdom*)
2. City of Prague (*Czech Republic*)
3. Region of Western Macedonia (*Greece*)
4. Abruzzo Region (*Italy*)
5. South-East Regional Development Agency (*Romania*)

INNOTRANS
Interreg Europe

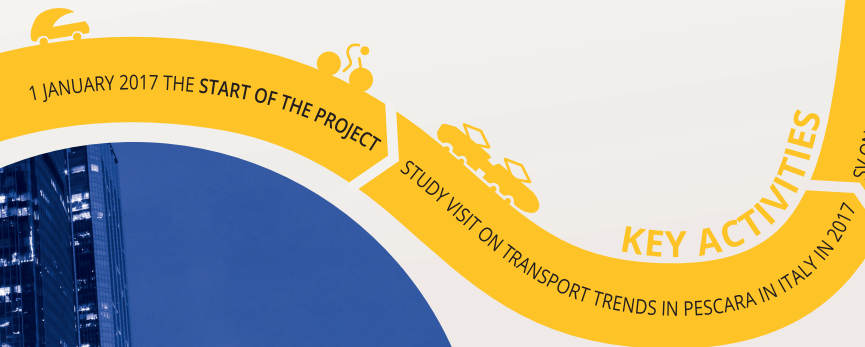

Enhancing transport innovation capacity of regions

Background

European transport companies are leading innovators. An innovative transport sector will help sustain the economic competitiveness of European countries as innovation and competitiveness are inextricably linked. Europe faces challenges of climate and societal change, increased demand in transport, congestion, scarcity of resources, and aging. There are major opportunities in optimisation of travel using ICT and satellite technologies, better infrastructure and improved security. INNOTRANS will improve current measures in support of transport innovation public funding schemes as a key element of the transport innovation infrastructure.

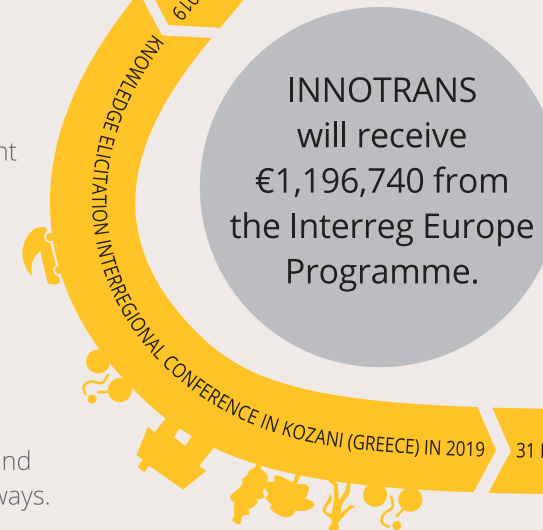

INNOTRANS Project objectives

To ensure innovation, we have to create the right environment. INNOTRANS will:

- Map regional transport innovation capacity and identify competitive advantage
- Identify and publish good practices
- Publish guidelines for policy interventions and action plans
- Create funding strategies

The project will create the environment to link and leverage transport assets in new and different ways.

INNOTRANS will receive €1,196,740 from the Interreg Europe Programme.

Transport experts sharing together their visions for innovation

INNOTRANS is connecting and mobilising stakeholders in transport to inform and direct policy, creating the best environment possible for improving innovation in transport. Collaboration amongst transport leaders, industry and academics is at the heart of the INNOTRANS project.

KEY ACTIVITIES

31 DECEMBER 2021 END OF THE PROJECT
