

Media Release – EPT – 30.03.2017

The strategy of the Crete Region for the energy upgrade of its buildings was presented at the 3rd meeting of the European project REBUS in Malmö, Sweden.

The REBUS project, implemented by the Region, aims to identify directions for efficient energy upgrading of public buildings and is a "tool" for achieving its goals of saving energy and resources.

Concluding the first year of successful implementation of the European REBUS, the project partners had the opportunity to assess their progress so far and set new ambitious targets. Within the framework of the interregional exchange, good practices were presented by the European regions and local stakeholder groups and their strengths and weaknesses were discussed.
