

European Commission

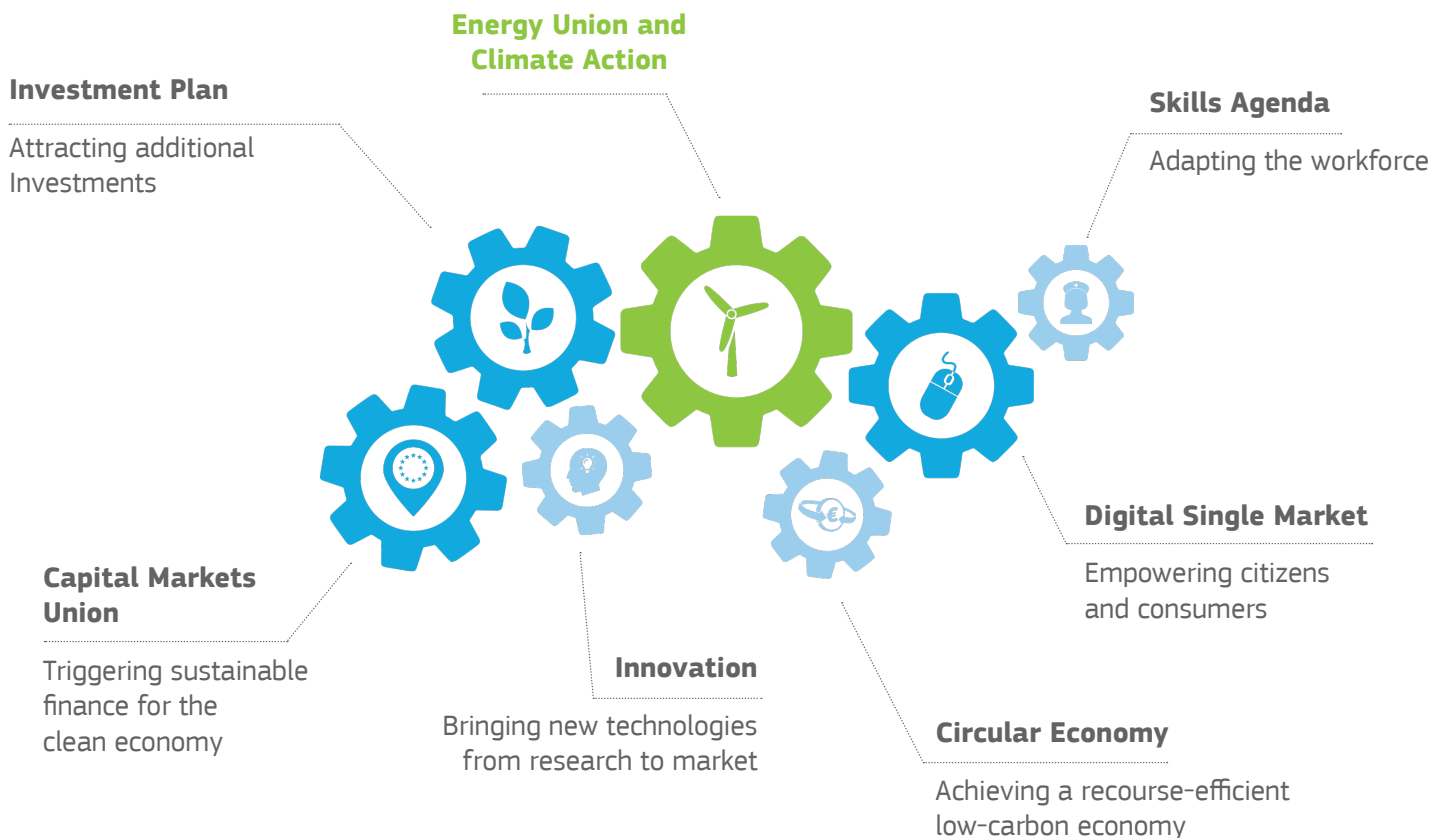

## Clean energy for all Europeans

### OUR ACTION

The global clean energy transition has started and it is irreversible. The European Union not only wants to adapt, but to lead. We want to achieve our ambitious climate and energy targets whilst keeping in mind that our economy also needs to provide jobs and growth for our future citizens.

Our “Clean Energy For All Europeans” – proposals are designed to show that the clean energy transition is the sustainable growth sector of the future. This is where the smart money is: last year, clean energy attracted a record global investment of over EUR 300 billion, six times the amount in 2004.

## HOW DO WE GET THERE?

Delivering on **social concerns and job training** to ensure a socially fair energy transition

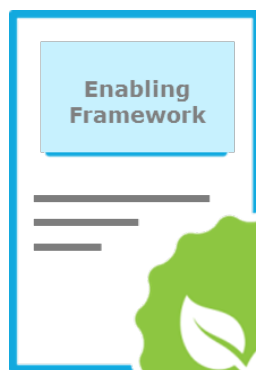

Driving **digitalization** forward to enable new energy technologies

Setting the right incentives for **investment in the energy transition** and maximising the leverage of public funds

Accelerating **research and innovation** to support leadership in advanced renewables and energy-efficient solutions

**External dimension:**  
Fostering security of supply and promoting clean energy measures abroad

Delivering on key **energy infrastructure** projects

**Ensuring regional cooperation:**  
Making the energy transition a **multi-level government, citizens and stakeholder project**
