

TOGETHER project presented to international experts on energy management

TOGETHER project has been presented for international experts on energy management and smart metering at Paks, on 5 Jul.

The attendees – arriving from United Kingdom, France, Spain, Portugal, Italy and Lithuania - are working in the SET-UP project, financed by the Interreg Europe programme.

The cooperation is focusing on the penetration of smart grids and smart metering. The Paks interregional event contributes to the work of Partners during the third semester within the three Energy Teams and to the ongoing exchange of results in connection with smart grids. The Paks event, besides discussing and approving the Joint Thematic Analyses had a special focus to deal with the thematic area on consumer empowerment.

TOGETHER showed good practices on this field by introducing low-cost demand side management technics to improve energy efficiency in public buildings. Besides, participants have been informed that smart meters are used in the project to define the baseline energy performance values of the buildings and to measure the results of the DSM actions.
