Good Practice: Aesthetical Integration of Waste Solutions in urban Scenery

Aesthetical integration of the bins in Dalt Vila, ensuring architectural and cultural values are protected via a specific regulation (P.E.P.R.I.).

Sandra Romero Ramón

Environmental technician Town Hall of Ibiza

15th – 16th November 2017, Ibiza (Spain)

**Thematic Seminar on Integration of Waste Management
Solutions into the Urban Décor of Heritage Areas**

Origin

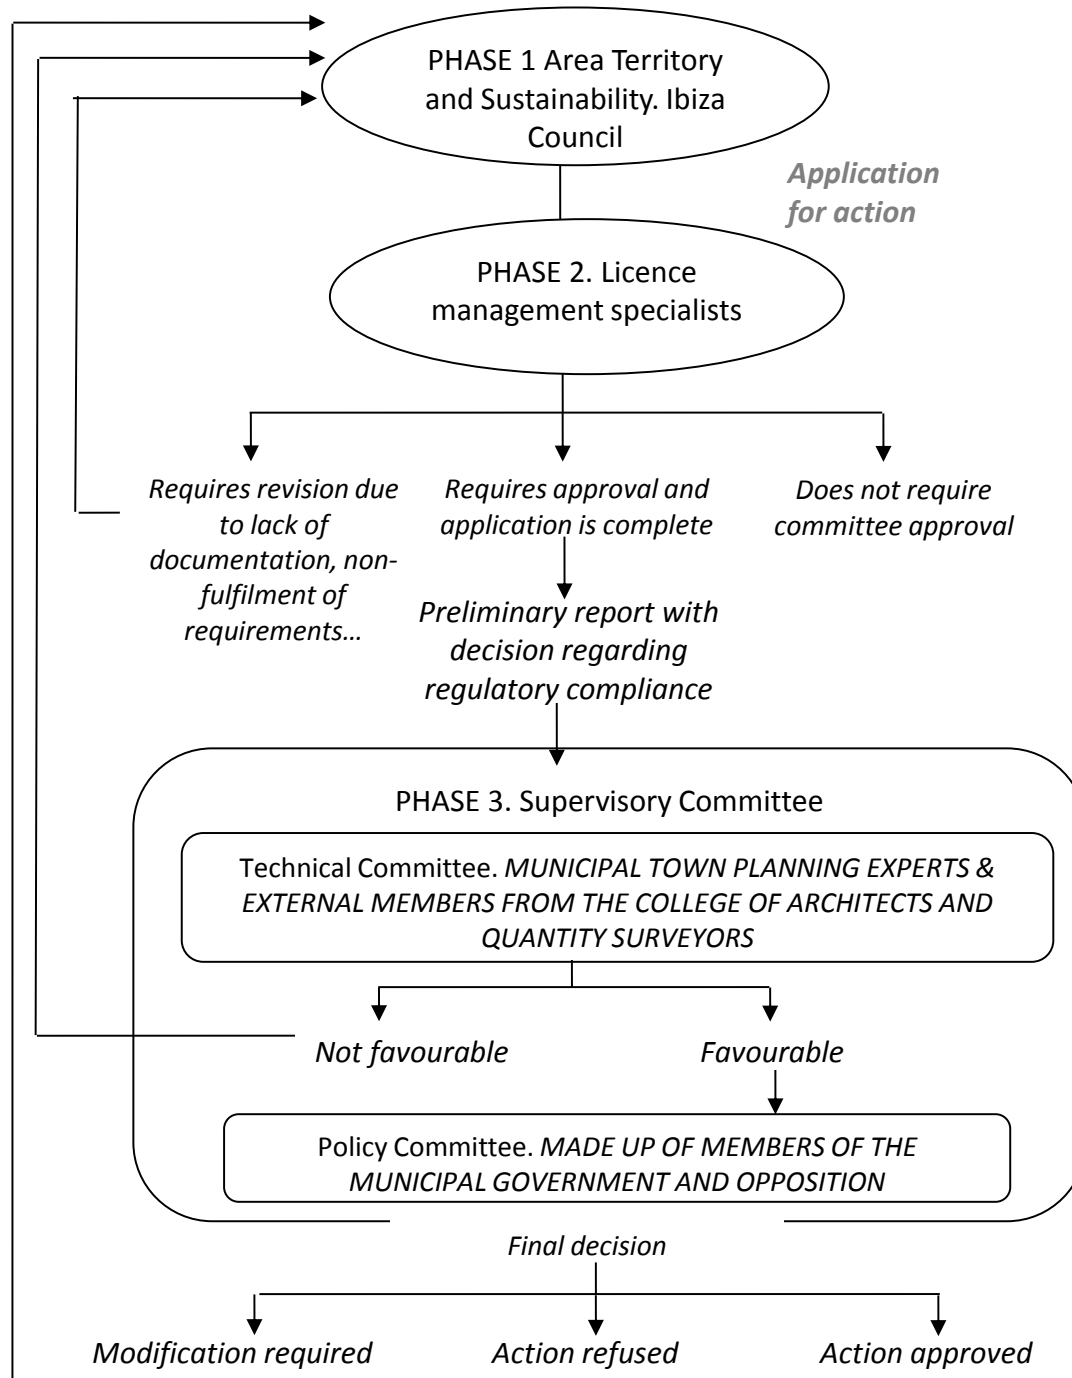

- Need to preserve the values of the historical centre.
- Need to have an instrument that coordinates and harmonises the criteria for elements located on public thoroughfares, such as urban furniture (waste bins, litter bins, etc.).

Action

- **P.E.P.R.I → Special Plan of Protection and Interior Reform for the zone**
(promoted by Eivissa City Council)
- The P.E.P.R.I. establishes the conditions for action and use and the procedures to be applied in any initiative affecting the historical area.
- See the committee approval process for the P.E.P.R.I.

Action

Results

- Bins / Elements integrated within the zone's appearance as per the criteria established by the P.E.P.R.I.
- Aesthetically and functionally uniform
- Visual impact reduced
- The Committee meets once a month and 10 applications are processed on average.
- Approximately 60% are positive cases and the rest negative, basically due to incorrect or incomplete documentation.

Results

Success factors	Difficulties encountered
✓ The elements located in the zone are controlled and regulated directly.	✗ Investment to be made by the Council.
✓ Different degrees of conservation and procedures are established depending on the elements, where applicable.	✗ Slower decision-making (since the P.E.P.R.I. procedure must be carried out).
	✗ Need to maintain areas, coordination with the service (or task force) for parks and gardens in the cases of plant decoration.
