

Stakeholders Group Meeting n° 4

Date	27.03.2018, 13.45-16.00
Meeting place	Hopner house, Raekoja plats 18, Tallinn
Aim of this meeting	<p><i>To introduce stakeholders new Waste Management Plan of Tallinn 2017-2021.</i></p> <p><i>To provide stakeholders overview about our feasibility study that will be carried out in summer. Feasibility study topic is “Feasibility and cost-benefit analysis of the pneumatic waste collection system in the old town of Tallinn”.</i></p> <p>To get active feedback and expertise from stakeholders in drafting the activities of the project.</p>

**Minute of the meeting:
Topics explored - Decisions taken**

13.45-14.15 Registration and welcome coffee

14.15-15.00 Introduction of Waste Management Plan of Tallinn 2017-2021, Kristjan Mark, Tallinn Waste Center

Kristjan introduced new Tallinn Waste Management Plan of Tallinn for period 2017-2021 which was adopted in the end on 2017. New Waste Management Plan also introduces INTHERWASTE project.

15.00-15.30 Compilation of “Feasibility and cost-benefit analysis of the pneumatic waste collection system in the old town of Tallinn” and overview about Finland pneumatic waste collection system. Eliis Kuus, Tallinn Environmental Department

Eliis made overview about feasibility study that Tallinn Environmental Department will be carrying out during the summer. The study should be finished in the beginning of October.

Eliis made an overview about the trip to Finland - Tallinn representatives visited 23.03.2018 the City of Helsinki to get acquainted with Finnish waste management system and see working pneumatic waste management system. A summary has been prepared about gained experience.

Debate, questions and answers

After the presentations, there was lively discussion between members of stakeholder group. Representatives of Old Town Society shared their problems related to waste sorting, e.g the lack of space makes waste sorting hard and there is not enough public waste containers for sorted wastes.

Also they expressed their concern about the establishment of pneumatic waste collection system and its impact to Old Town old buildings. Otherwise, they supported the establishment of this system to new areas.

Representative of UNESCO asked if in the feasibility and cost-benefit analysis has also taken into account old town architectural and heritage aspects.

Participants made a recommendation that as we are expecting the feasibility analysis result we should not stop considering other solutions for Old Town.

All materials of the meeting. Including agenda, presentations and photos, are published on the website
