

IMPORTANT Sites or Links for Social and Environmental outcomes, indicators and valuations

<http://www.globalvaluexchange.org/> gives outcomes, indicators and valuations relating to social and environmental keywords

Principally produced for social investors, this needs some practice, it is based on a keywords search, sometimes the where outcomes, indicators and valuations are listed linked to the keyword for example Waste

Results

[Next page →](#)

Waste produced (change in) for Waste management services (Organisations/The State)

Indicators

<https://iris.thegiin.org/> for Metrics for investors, recommended to download the full catalogue . There are often references/links to IRIS from the Global Value Exchange Site

<http://www.hact.org.uk/social-value-bank>

<http://www.hact.org.uk/publications-and-tools>

HACT the UK Housing Associations' Charitable Trust, working with with Daniel Fujiwara, have created the largest bank of methodologically consistent and robust social values ever produced. The values can provide a basic assessment of social impact, provide evidence of value for money, and compare the impact of different programmes. The values can also be used within a full SROI or Cost -Benefit Analysis.

This is another very useful site with values relating to social outcomes (can be used or adapted as indicators) it is important to note that these values have been created according to a robust and accepted methodology which is extensively used in the UK and other countries to justify or evidence investments.

[https://www.nice.org.uk/ Quality-adjusted life year \(QALYS\)](https://www.nice.org.uk/ Quality-adjusted life year (QALYS))

A measure of the state of health of a person or group in which the benefits, in terms of length of life, are adjusted to reflect the quality of life. One QALY is equal to 1 year of life in perfect health. QALYs are calculated by estimating the years of life remaining for a patient following a particular treatment or intervention and weighting each year with a quality-of-life score (on a 0 to 1 scale). It is often measured in terms of the person's ability to carry out the activities of daily life, and freedom from pain and mental disturbance.

	Well-being domain	Proportion of overall value	Financial value
Personal well-being	Emotional well-being	10%	£1,056
	Satisfying life	10%	£1,056
	Vitality	10%	£1,056
	Resilience and self-esteem	10%	£1,056
	Positive functioning	10%	£1,056
Social well-being	Supportive relationships	25%	£2,640
	Trust and belonging	25%	£2,640

This is a particularly robust and accepted indicator and value list (values are proxies). Whilst there may be some direct physical health benefits from adopting circular practices/products, the most likely benefits are relating to mental health.

Here are the table of values for those with 10% value read €1200, for 25% 3000. Whilst we cannot expect an adviser to be able to fully understand (or calculate) the ROI relating to mental health/well-being at least this gives an indication that these social 'returns' do have value to society and to the business in question. Simply put an employee who is 'well with their job' is more productive and a better contributor to society as a whole.

Here is a short list of links to other sites that are useful for indicators (please develop your own list particularly if there are relevant lists in your own language/country)
