WINPOL – Promoting innovation to improve waste management at the local level

OBJECTIVE

This European project aims to improve regional and local waste management practices by promoting the use of intelligent equipment and related policies leading to optimised management, waste minimisation and better awareness.

WINPOL
Interreg Europe

European Union
European Regional
Development Fund

2 PHASES

1. Interregional learning (2018-2020): partners identify and exchange good practices, conduct study visits and incorporate the knowledge into concrete action plans;

2. Implementation (2020-2022): partners put into action the knowledge acquired and monitor and report on their results, sharing solutions with other European cities and regions.

KEY OUTPUT

40 good practices and policies on 3 main themes:

- New technologies and efficient use of information (Big Data);
- Innovative models for waste collection, prevention and recycling;
- Different models for waste generation fees.

These good practices will be available as part of the Interreg Europe database gathering ideas and techniques successfully put in place in European regions.

GET INVOLVED

- Share your ideas and present your good practices related to the 3 main themes at a dedicated Thematic seminar;
- Learn from other approaches existing in Europe during thematic seminars and site visits;
- Join one of the six groups in Gijón (ES), Antwerp (BE), Malta, Crete (GR), Maribor (SI), and Mehedinti County (RO) and support the project partners in the development and implementation of their action plans.
