GOCORE

Governing Community Resilience

The **Governing Community Resilience (GOCORE)** project builds **resilient regions by increasing local engagement and participation**.

The project aims to enhance the development of territories in rural and/or peripheral regions by **engaging** and **empowering communities** as active partners in **regional policy development and implementation**, through the exchange and implementation of governance practices.

GOCORE brings effective mechanisms for community engagement and empowerment in regional policy and decision making by **involving, empowering** and **demonstrating** to **regions** how to address today's important societal challenges such as climate and digital transitions, and socio-demographic developments such as ageing, depopulation and migration.

GOCORE activities

Regional Stakeholder Group

Learn, explore and implement interregional practices

Identifying good practices

Collect and analyse existing good practices in community engagement, empowerment and impact demonstration.

GOCORE Guide for Resilient Communities

Webinars

Online seminars showcasing community resilience initiatives in:

- Climate transition
- Digital transition
- Socio-demographic change

GOCORE pressure cooker

Intensive learning events combining peer review with experts from partner regions, and seminars

Policy improvement

Step-by-step process embedding the learning on regional policies from the GOCORE project

GOCORE principles

ENGAGE

local communities

EMPOWER

for community action

DEMONSTRATE

the power of the community
