

**NOTRE | eDialog srl,
Revolutionize Home Care
with FamilyHelp.ai: Technology in the Service of Wellness**

“Enrico Paccini, CEO eDialog srl (Parma)”

In the ever-evolving field of healthcare technology, the company Edialog confirms itself as a beacon of innovation with the launch of its latest creation, FamilyHelp.ai. Specializing in the development of digital solutions for the healthcare sector, Edialog has demonstrated its commitment to improving the quality of life for millions of dependent people in Italy. The company entered the market with groundbreaking projects such as Ebloo, which introduced blood pressure monitoring through the use of Alexa devices and a dedicated app, and later eGluc, which extended this technology to blood sugar monitoring. Today, with the release of FamilyHelp.ai, Edialog takes home care to a whole new level. **After three years of development and research, this revolutionary platform promises to radically change the way families care for their dependent loved ones.**

The logo for FamilyHelp.ai features the word "familyhelp.ai" in a green, lowercase, sans-serif font. Above the word "family", there are three stylized human figures represented by green circles for heads and curved lines for bodies. The ".ai" part of the domain is enclosed in a blue square with a white dot above the 'i'.

familyhelp.ai

"Our vision has always been to use technology to improve people's quality of life," says Edialog's CEO. "With FamilyHelp.ai, we are redefining home care, offering comprehensive and personalized support for both families and caregivers."

It is a digital platform for home care of dependent persons, which manages the needs that may arise involving the family, caregivers, and care recipients. Through an app, which caregivers and family use, it is possible to manage and give directions with respect to the daily activities to be performed, thus facilitating the communication among them. The care recipients can communicate with their loved ones and their caregivers through Alexa.

FamilyHelp.ai stands out for its ability to efficiently and purposefully manage the complex home care needs. Thanks to its built-in artificial intelligence, the platform adapts to needs.

In a country like Italy, where some 3,800,000 dependent elderly receive home care and 90 percent prefer to remain in their own homes, FamilyHelp.ai presents itself as an **indispensable resource for improving the quality of life of the elderly and their caregivers.**

"FamilyHelp.ai represents a breakthrough in home care," stresses Enrico Paccini Ceo of Edialog. "It's not just about monitoring vitals, but rather offering comprehensive **support to everyone involved, from the family to the elderly themselves, to caregivers and agencies.**"

The launch of FamilyHelp.ai has generated a great deal of interest among operators, care agencies and families throughout Italy. With the potential to significantly improve the quality of life for the dependent elderly and their caregivers, Edialog is confirmed as a benchmark in technological innovation at the service of well-being. At a time when technology is becoming increasingly pervasive, the home care of the future is here, and it is called FamilyHelp.ai.
