1. Where it all started?

2. Set up

2.2 Tool -

2.1 Observation period: 15.12.2021-31.12.2022 (5 selected periods)

Power BI

2.3 Study area

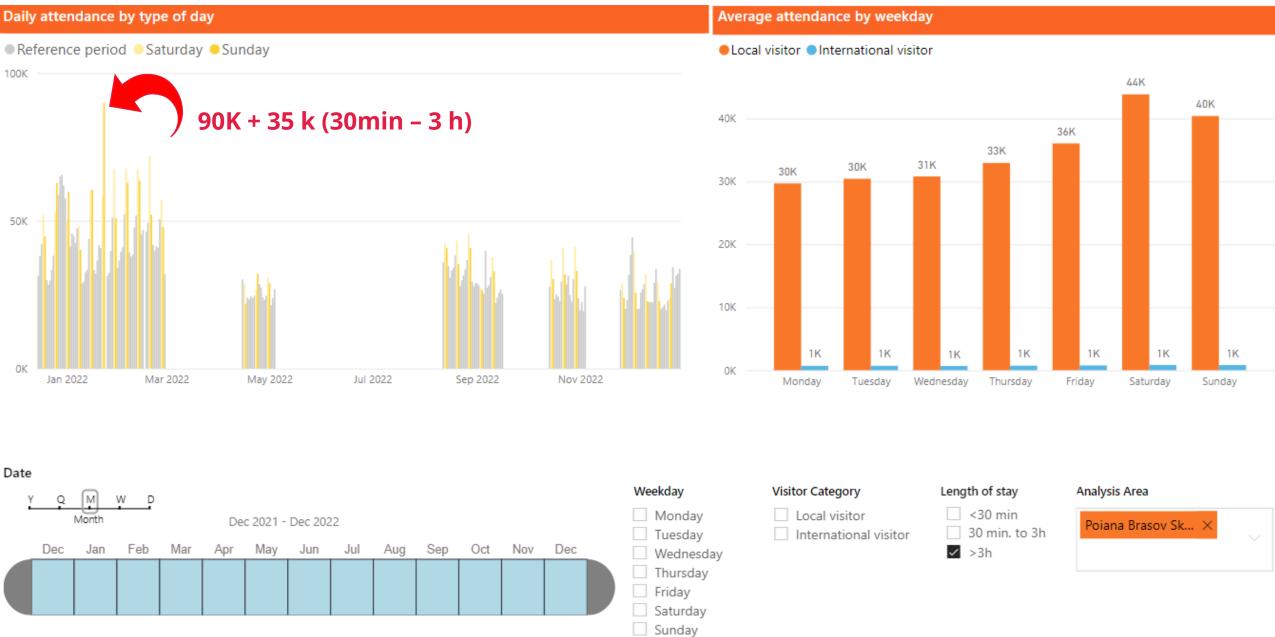

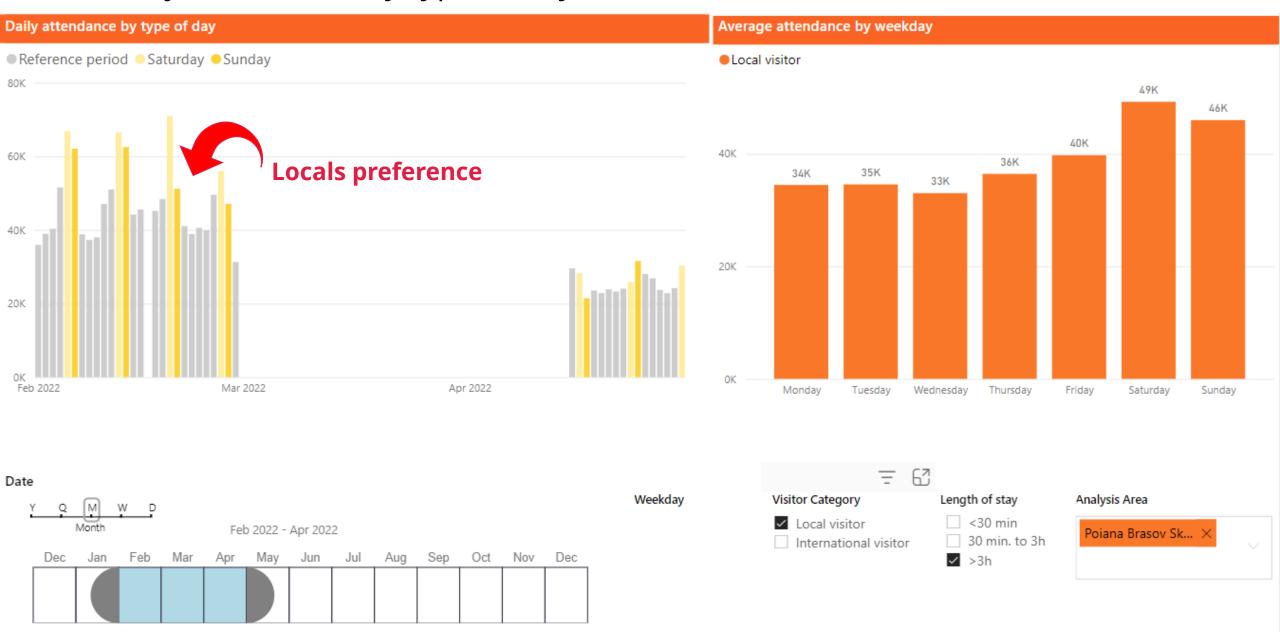

3. What has been analysed?

- 3.1 Daily attendance by type of day
- 3.2 Zone comparison
- 3.3 Attendance per slot of 30 min.
- 3.4 Incoming/outgoing flow per slot of 30 min.
- 3.5 Attendance by length of stay:
- 3.6 Overnight stay areas of visitors
- 3.7 Provenance of international visitors
- 3.8 Sociodemographic profile
- 3.9 Recurrance study
- 3.10 Origin-destination/slot of 30 min.

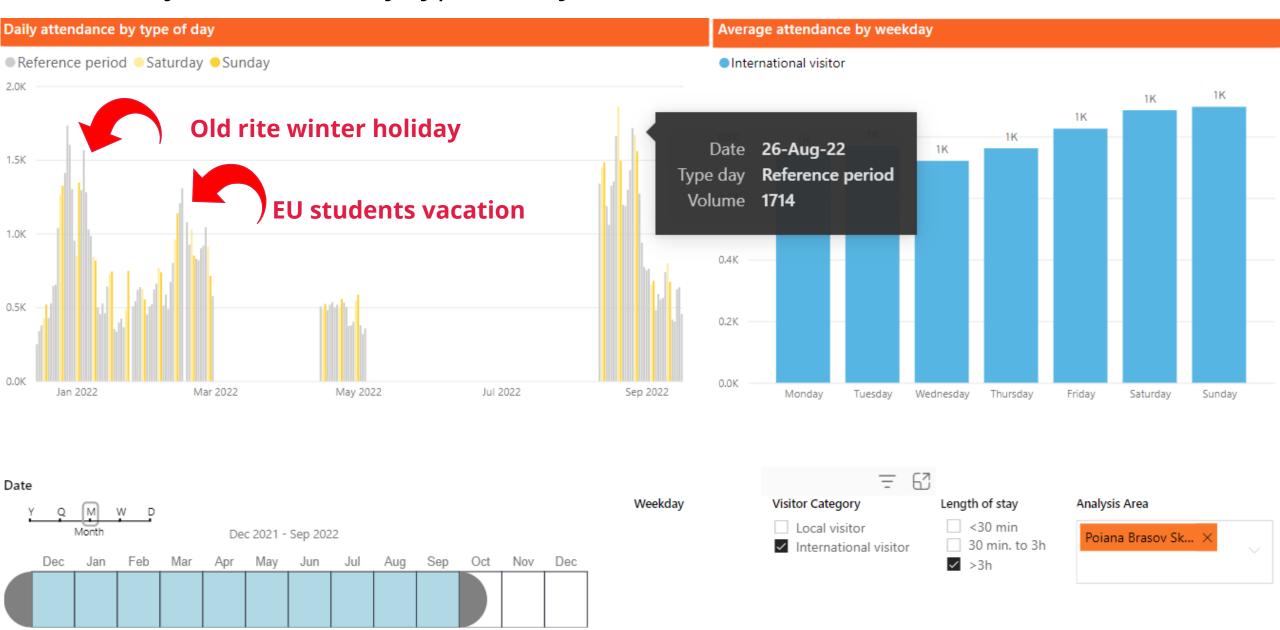

3.1 Daily attendance by type of day - general

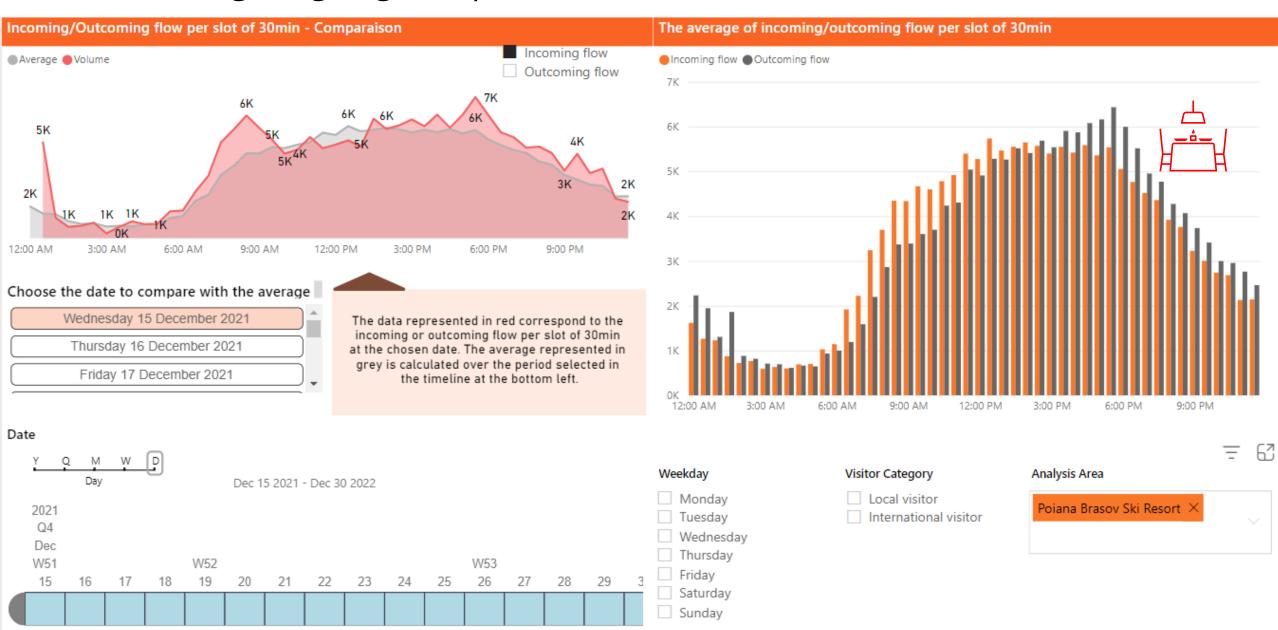

3.1 Daily attendance by type of day - locals

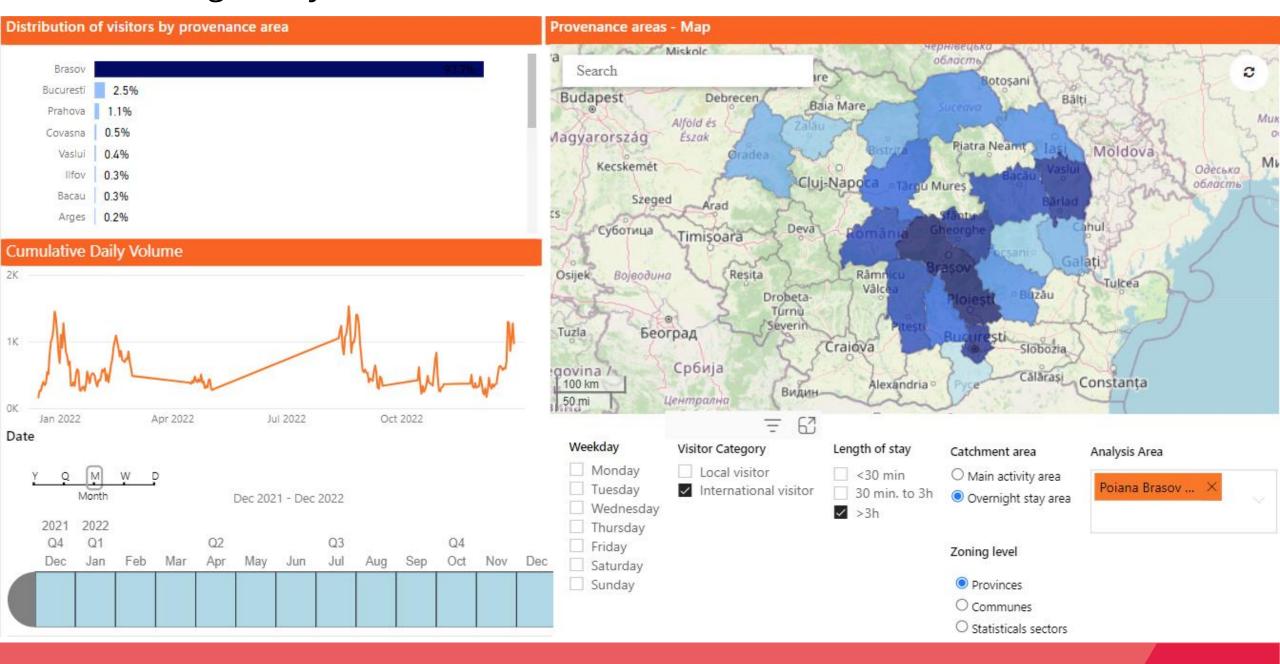

3.1 Daily attendance by type of day – international visitors

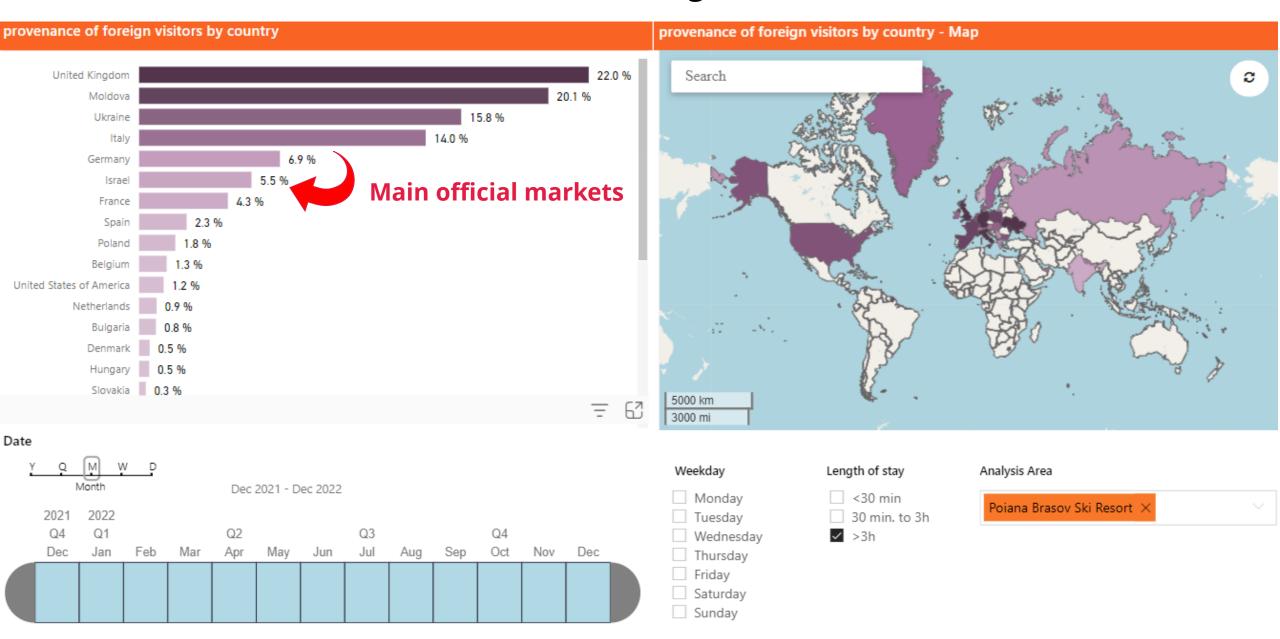

3.4 Incoming/outgoing flow per slot of 30 min.

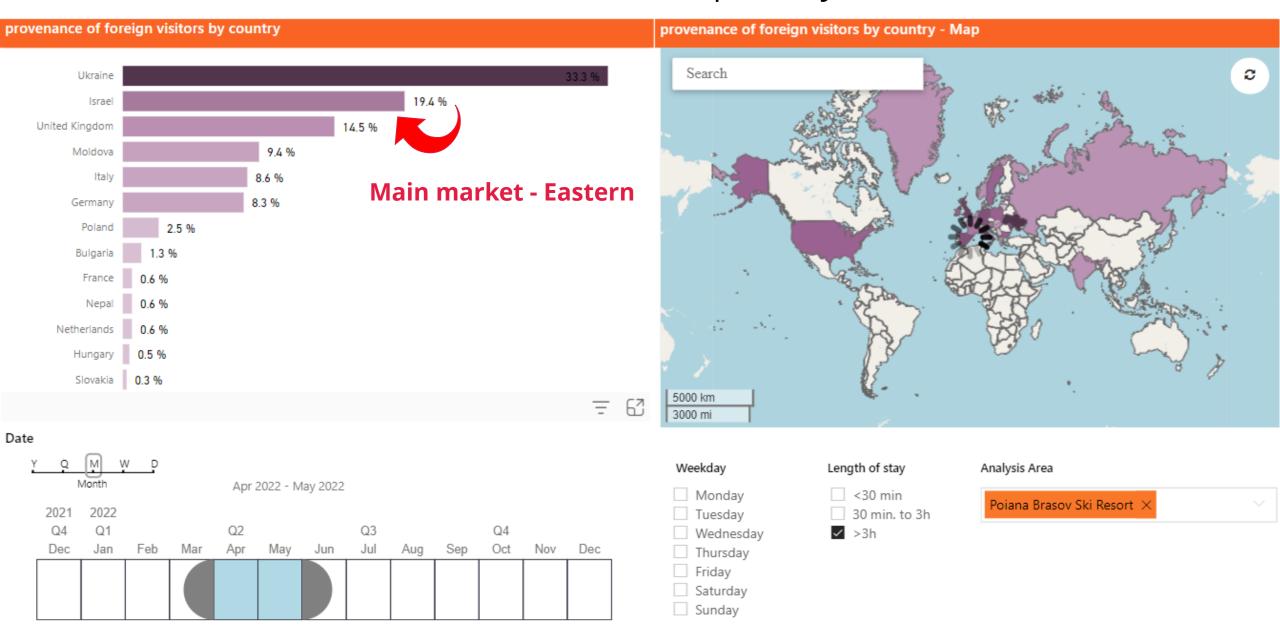

3.6 Overnight stay areas of visitors – international visitors

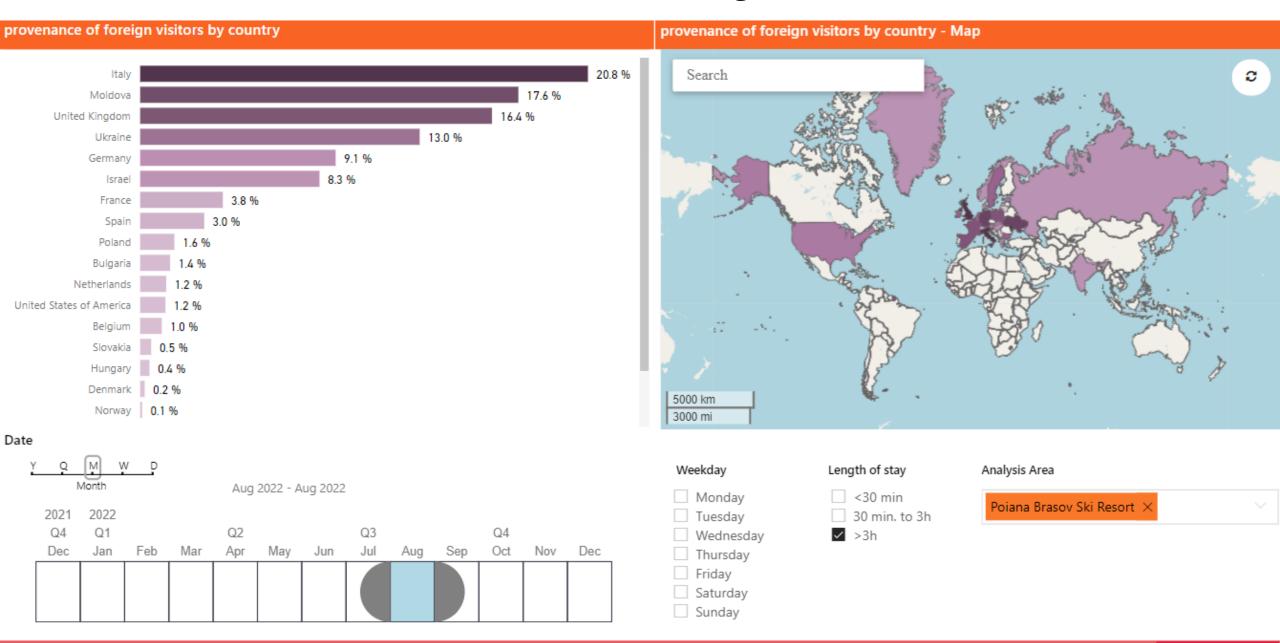

3.7 Provenance of international visitors - general

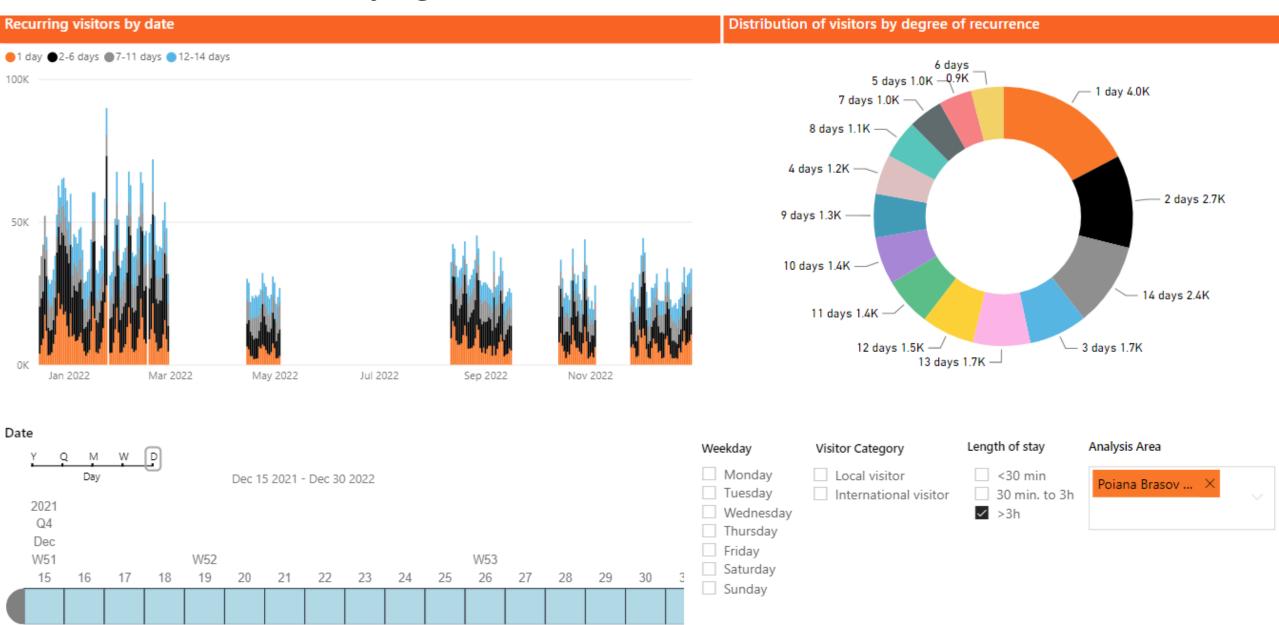

3.7 Provenance of international visitors – April/May (Easter)

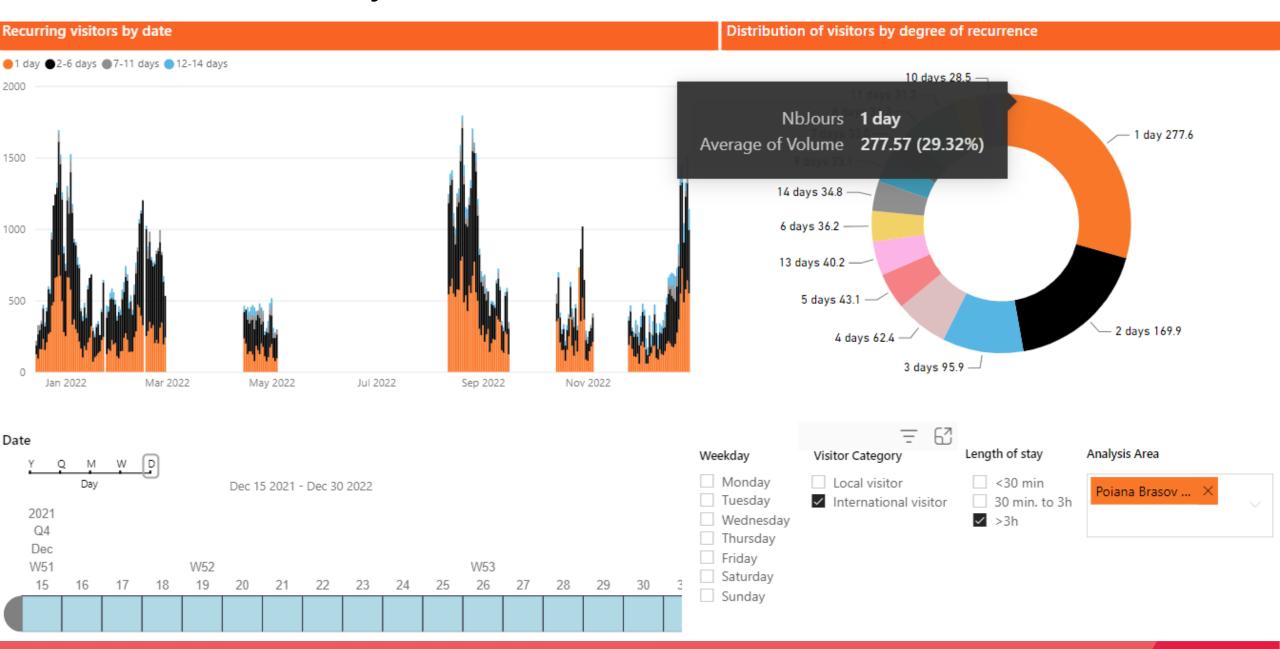

3.7 Provenance of international visitors – August (Peak Month)

3.9 Recurrance study - general

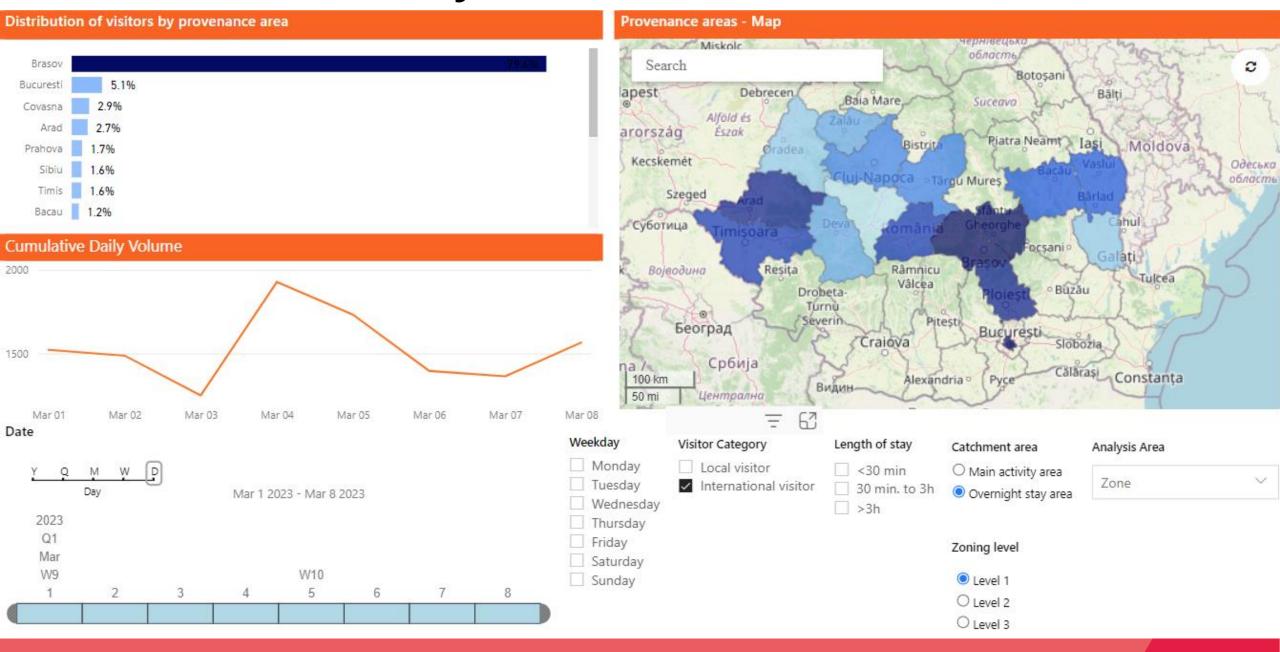

3.9 Recurrance study – international visitors

4. Extra case study – MASSIF Festival 1st ed. - March

4. Extra case study – MASSIF Festival 1st edition

5. Advantages of this kind of big data

- ✓ Much more information than the one provided by the National Institute of Statistic – pretty accurate daily visitors, their category, origin and previous overnight stay, length of stay, time slot, gender and age;
- ✓ Improved decision making, both in private and public sector:
 - **Custom** touristic **offer** based on their **sociodemographic**
 - Planning **public agenda** to mitigate the peak and the low season, by redistributing tourists in time and space

6. Future plans

- ✓ New analysis period: 8-17th of March 2024 (a normal weekend as baseline followed by one with a big event)
- ✓ MASSIF Festival Poiana Brasov
- ✓ Brasov old city center most crowded areas

Thank you!
