

**EMBRACER****Meet Tampere University**

Tram in Tampere, Finland, showcasing sustainable urban mobility and integrated transport infrastructure

Tampere University is a top multidisciplinary institution in Finland, combining research and education in technology, health, and society, and specializing in sustainable transport solutions and systems. The Transport Research Centre Verne at Tampere University, directly involved in the project, and led by Professor Heikki Liimatainen, brings expertise in mobility innovation and policy development, focusing on fostering sustainable, inclusive transportation systems.

The role in EMBRACER

Tampere University contributes as an Advisory Partner to EMBRACER, sharing knowledge and research insights on sustainable mobility, particularly around the integration of autonomous transport and intermodal connectivity in Tampere. The role involves offering advisory input to enhance project outcomes and impact.

The importance of being part of EMBRACER

EMBRACER supports Tampere's goals toward carbon neutrality and improved mobility by advancing research on autonomous and sustainable transport solutions. This collaboration offers valuable insights into the practical benefits of integrating autonomous vehicles, benefiting the city, region, and Finland by fostering innovation in sustainable mobility.
