

Scaling Reuse Together

**A Shared Digital Approach
for Municipalities**

**How Danish municipalities
are leading the way**

The Challenge

Why Action on Reuse is Urgent:

New LCA (CO₂) limits from July 2025 – stricter carbon requirements for all new buildings.

Selective demolition law from July 2025 – early mapping of materials becomes mandatory.

Materials become visible way too late – making it hard to reuse them in time.

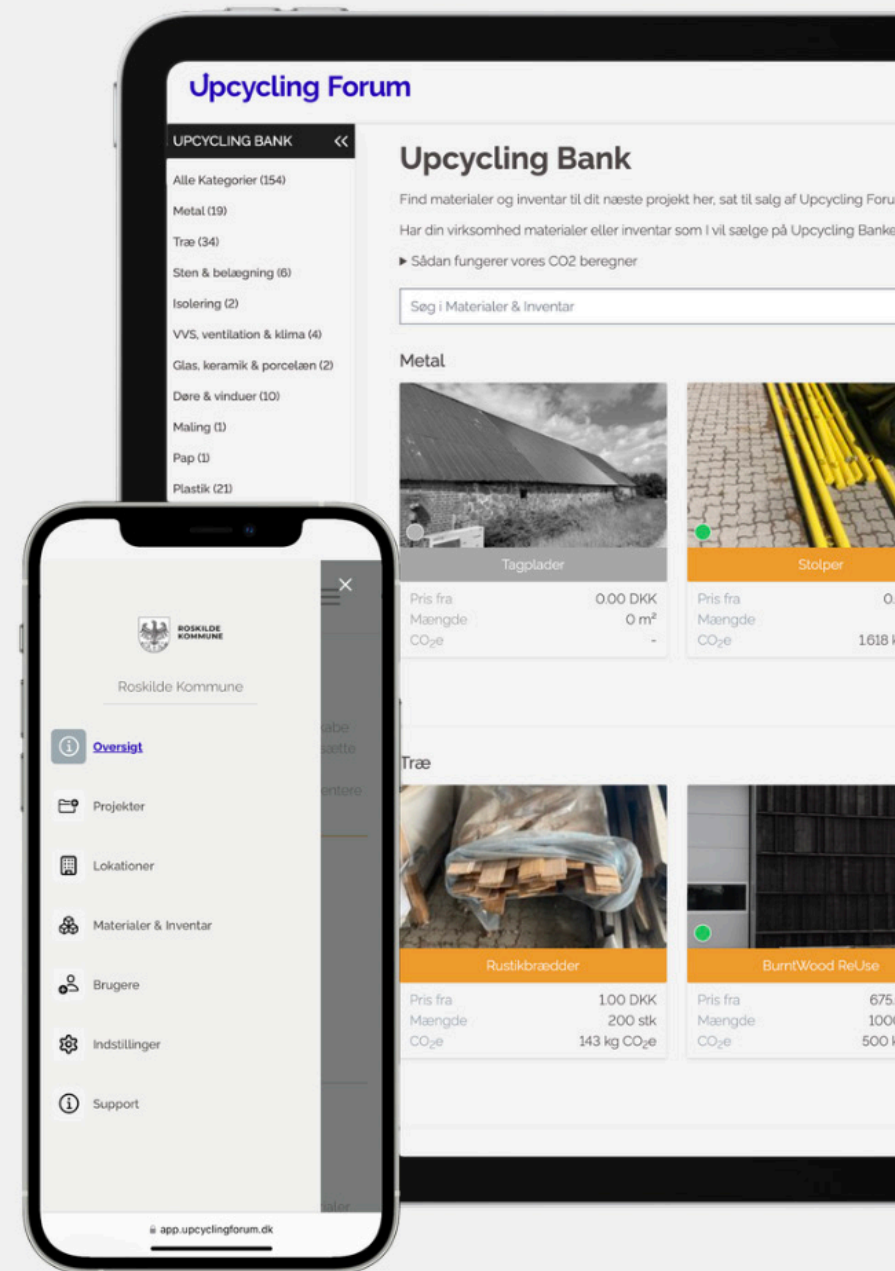

EU customers demand circular solutions – ESG, taxonomy, and tender requirements are driving reuse across Europe.

Our Platform

A Digital Tool to Unlock Reuse Potential:

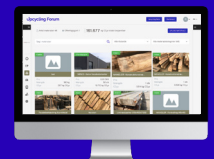

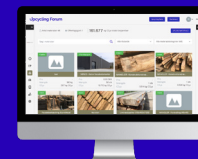

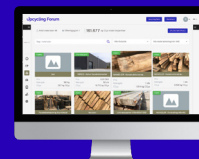

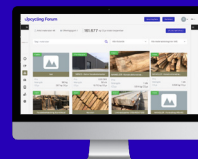

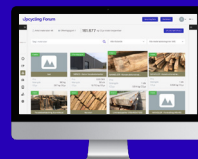

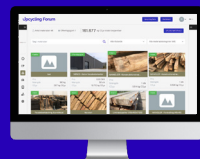

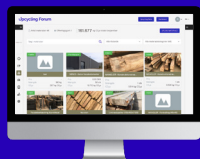

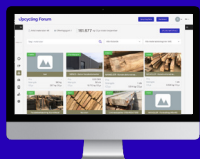

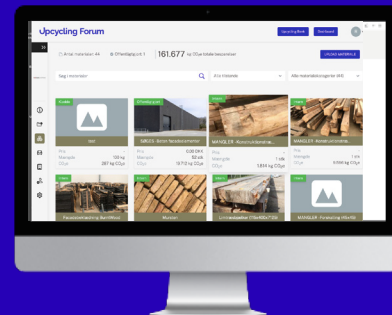

- **Map materials early with mobile**
(from buildings, demolitions, storages)
- **CO₂ savings automatically calculated**
- **Easy overview**
(buildings, materials and inventory)

The Municipal Reuse Network

9 Municipalities – One Shared Solution:

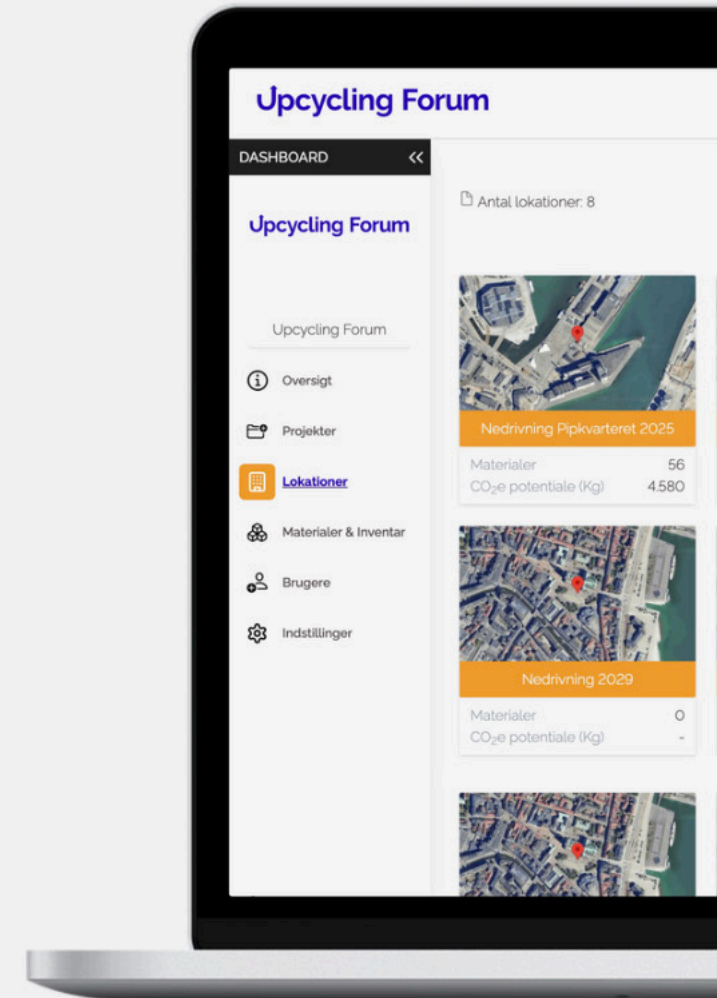

- Sharing material and inventory overview
- Sharing demolition and projects pipelines (future supply and demand)
- Exchange of materials, knowledge and creating synergies
- One platform, one data standard, one development setup

Concrete Results

What We've Achieved So Far:

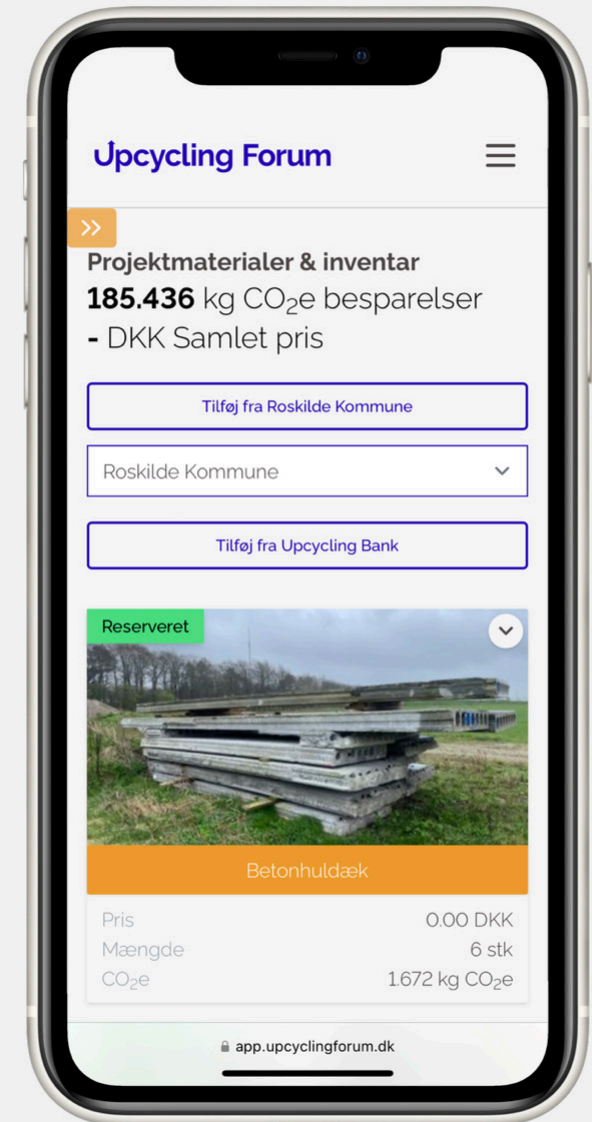

- 9 municipalities onboarded (+ 10 in the pipeline)
- 4000 materials from municipalities mapped
- Materials exchanges between municipalities
- Knowledge sharing
- reuse strategies across pipelines

How to Get Started

Simple Onboarding – Scalable Impact:

- **License-based access, no fee on sales**
- **Start with storage or demolition projects**
- **Full support + training**

Let's Build Circular Cities

Join the Movement:

- The tools are ready
- The network is growing
- Let's talk about your city
