

Implementation of the Electronic Health Record (GUHARA) in Primary Care

General Directorate of Digital Health and Infrastructures

- **GUHARA:** Global and Unique Electronic Health Record (HER) of Aragón
- Patient-Centered EHR
- EHR with a single, interoperable data model

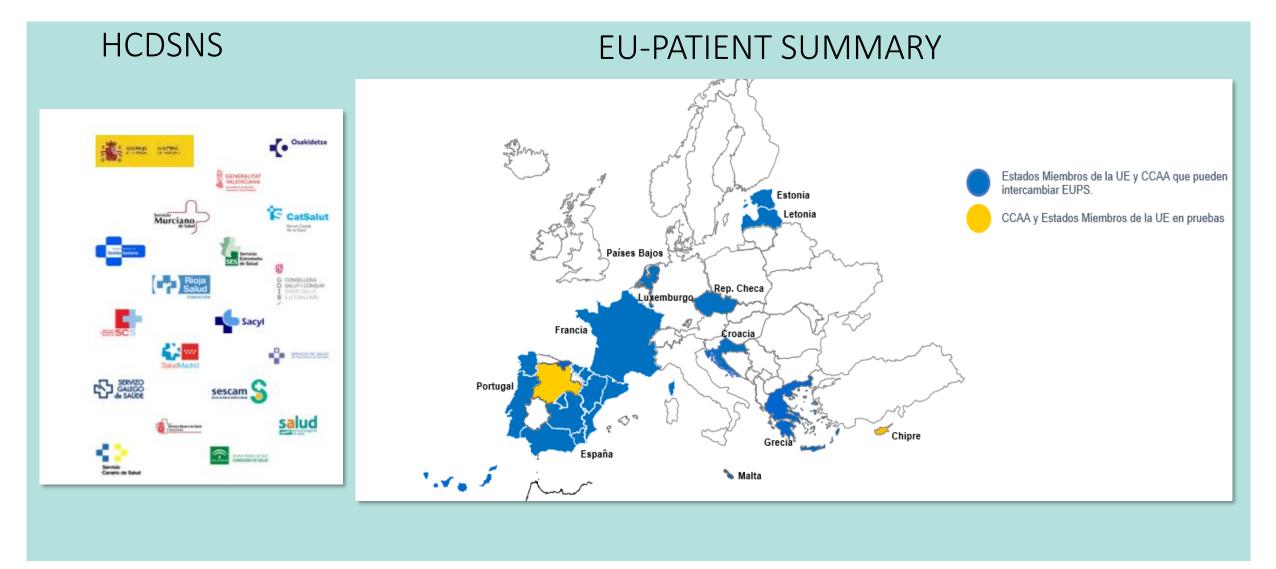

Pros: patient-centred

- Facilitates healthcare (unique and transparent information)
- Enhances security
- Focussed on precision medicine

Pros: Interoperability

Cons

- The newer application may lack some functionalities.
- Certain features currently available with OMI * will no longer be present.
- This represents a significant change in our workflow, requiring change management.
- Additionally, it involves modifications to the Primary Care Program Contract **

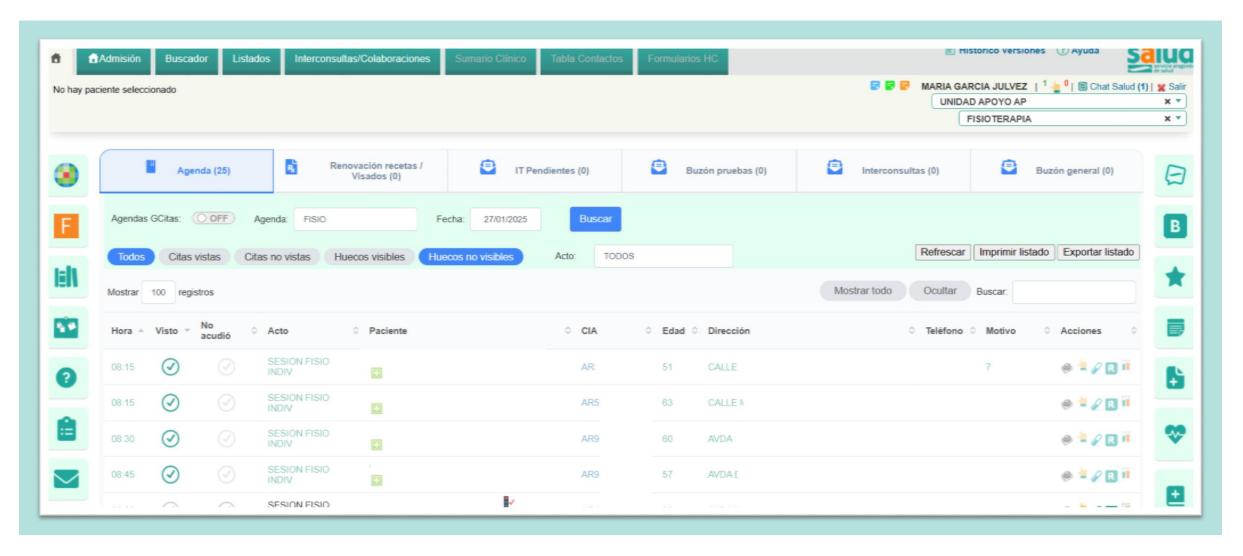

^{*} Primary Care management tool

^{**} A program contract is the tool that links the services, available resources and their management and organization with the achievement of certain objectives and results, strategic for the organization, in the field of continuous improvement.

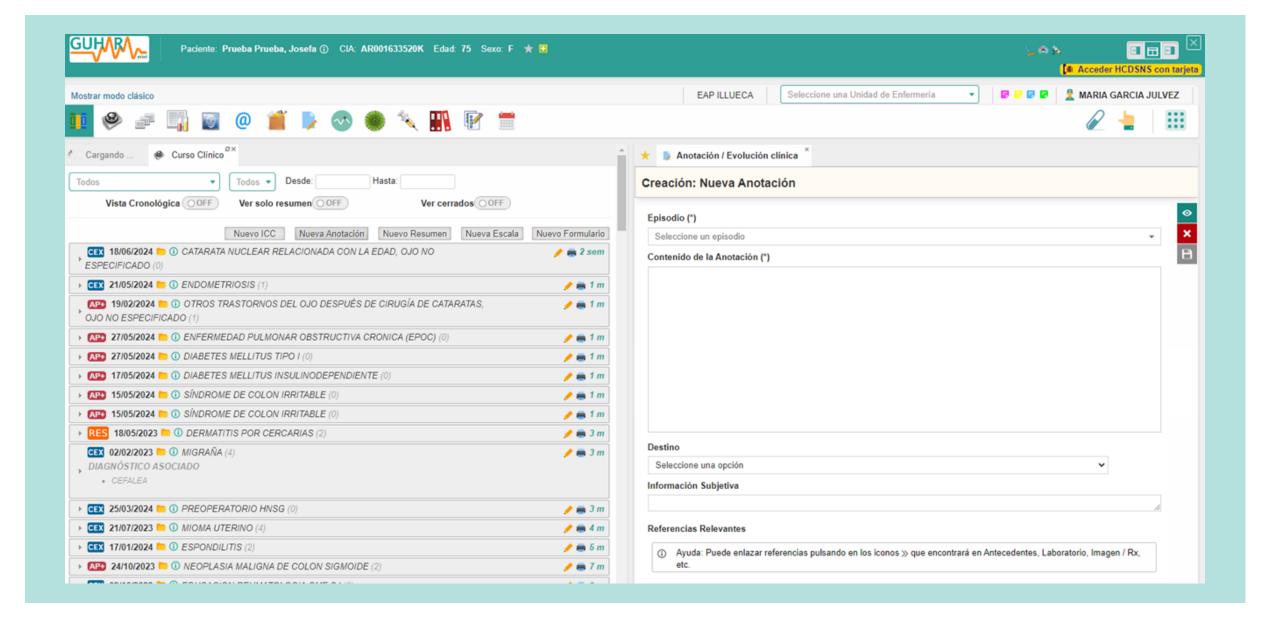

Clinical station for primary care

- Adapting Available Tools to Primary Care Needs:
 - Clinical course
 - Comprehensive Management of Electronic Requests (GIPE) *
 - Vital signs, etc.
- Creating a New Desktop Application that includes everything necessary for daily work
- Incorporation of new tools: (some examples)
 - Video consultation
 - New laboratory module
 - Patient agenda
 - Guhara-Citas as an agenda management module (laboratory)
- Future Enhancements:
 - Body Image Representation
 - Process Programming Tool
