

OD4GROWTH

Unified Digital Street Map of Andalusia (CDAU)

Increase quality standards of public services with Open Data implementation

Jose Merchán

Chief of Cabinet and Manager of CDAU at the Institute of Statistics and Cartography of Andalusia PARTNER REPRESENTED: FAMP

May 2024 | Sevilla meeting

GEOGRAPHICAL SCOPE/PUBLIC POLICY ADRESSED

CDAU serves as the official digital street map for the Junta de Andalucía, integrating several geographical and alphanumerical data bases. Initiated to address the need for a comprehensive, up-to-date street map, CDAU plays a crucial role in geocoding addresses and supporting diverse administrative services.

Triggers of the problem:

- Fragmentation and inconsistency in postal adresses and street map sources.
- Lack of an unified, centralized and reliable data base for postal adresses, both alphanumerical and geographical
- Growing need for reliable geospatial information in administrative functions.

Objectives of the project:

- Integrate diverse postal adresses and street map sources into an unified, official digital map, and in doing so, provide accurate and reliable geographic location unified data for all registered addresses.
- Support administrative procedures in general; geocoding of population and economic activity
- To implement all of the above through open data

Affected parties:

- Residents and businesses in Andalusia relying on accurate address information.
- Administrative services at all levels such as for example emergency response and registration procedures.

Expected impact:

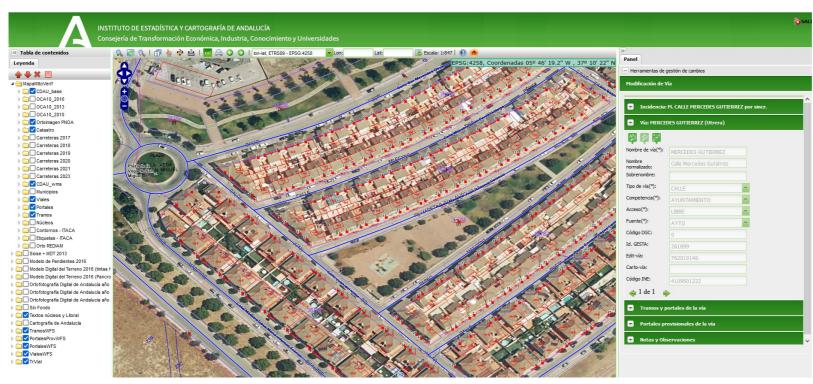

- Improved accuracy in identifying postal adresses, benefiting residents and businesses.
- Enhanced efficiency in emergency services and administrative functions.
- Centralised, authoritative source for postal adresses information both alphanumerical and geographical in Andalusia.

Unified Digital Street Map of Andalusia

The Unified Digital Street Map of Andalusia (CDAU) project, started in September 2011, aims to create a high-quality, publicly accessible digital street map for all municipalities in Andalusia. This map is regularly updated and enables the spatial location of any object or event based on a postal address.

How it works:

- * Meetings with local authorities
- * Training of local councils staff
- * Creation of products such as Dynamic PDF Maps; Tools for Inserting CDAU web viewers in municipal webpages
- * OGC services updated daily

SMART

* web services

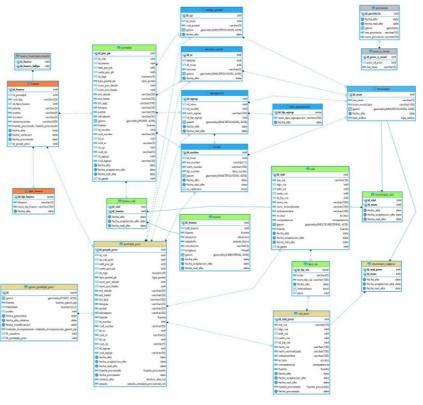

Resources needed:

- Development of technological platform and other jobs contracted to companies in the sector: 2.285.746,57€, co-funded with european funds.
- Since 2011, the project has an average staff of 8 technicians

Unification of sources and unique identification of spatial objects

A sound database model

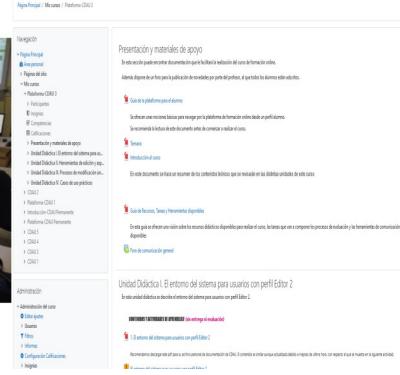

Development of a technological platform for CDAU manteinance and training directed to local administration technicians

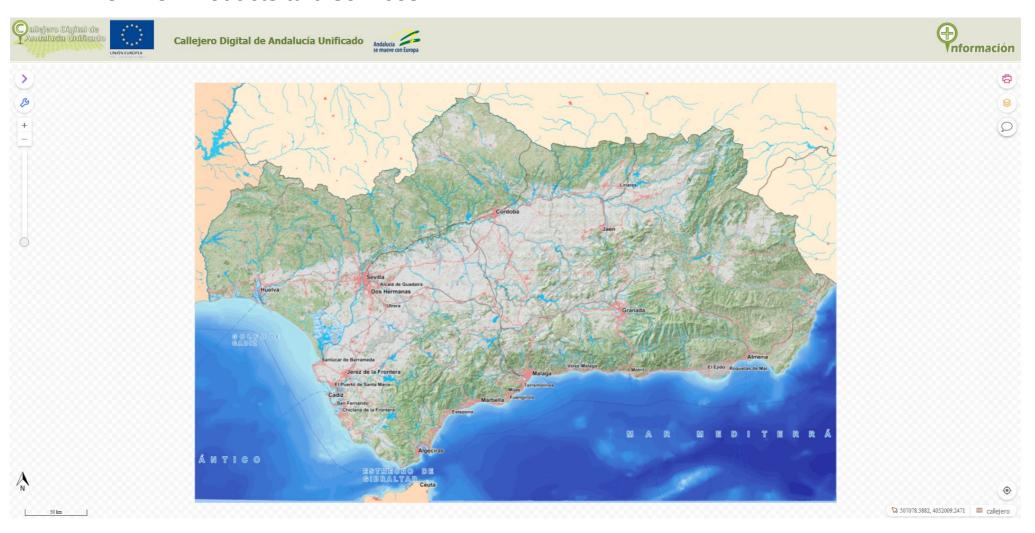

Plataforma Web CDAU (Editores 2)- Edición 3

- . More than 400.000 thousand updates to CDAU from 2016 to 2023
- . Evolution of the technological platform
- . Integration of CDAU with different digital administration systems

SMART

MATURITY, OUTPUTS AND EVIDENCE OF SUCCESS

- There is a legal framework and institutional structure that covers the project (Law of the Statistic and Cartography Plan of Andalusia 2023-2029) and collaboration agreements with provincial councils
- It is integrated into the Andalusian emergency management system
- It is also integrated in the public schooling official online tool for choosing schools
- It is used as a basis to georeference people and companies and generate geostatistical products that are disseminated through the IECA website: Spatial distribution of the population in Andalusia and ESPAND
- Has been used to improve accessibility to acute stroke care https://journals.sagepub.com/doi/full/10.1177/23969873221101282
- As a tool for local councils addressing house street number issues in areas of scattered population distribution: https://www.conildelafrontera.es/numeraciondiseminado
- Nearly 100 tourist guidess APP's for mobile devices built along with city councils: https://play.google.com/store/apps/details?id=es.juntadeandalucia.mapea.sepim.istan&hl=es&gl=US
- And, finally, by the results of hundreds of thousands of streets and street number updates, alphanumerical or geometrical
 or both, since the beginning of this project.

POTENTIAL FOR LEARNING OR TRANSFER OF THIS PRACTICE

- a) **Relevance:** Aligned with the Interreg program's goals, CDAU significantly contributes to improving public services, especially in emergency response, administrative procedures, and geocoding. It addresses the critical need for an unified and reliable spatial dataset for postal adresses.
- b) Impact: The practice demonstrates substantial positive effects by providing accurate and up-to-date geographic information, fostering efficiency gains in various public services. Its scalability is evident as a foundational infrastructure supporting a multitude of administrative functions. CDAU is part of the process of building open data infrastructures with analytical capabilities, whose ultimate goal is the development of government intelligence tools at all levels (like for example the ESPAND project)
- c) Replicability: CDAU's success lies in its clear data model, GIS topological structure, and collaborative maintenance by local entities. The practice is highly replicable, offering guidelines and methodologies easily transferable to different regions or contexts.
- **d) Sustainability:** Maintained by local entities, particularly City Councils, CDAU exhibits long-term viability. Regular updates, collaboration with diverse entities, and its role as a fundamental resource for multiple services ensure continued positive outcomes.
- e) Innovation: The practice demonstrates innovation in its collaborative approach, integrating data from various sources, conforming to the Inspire Directive, and providing diverse geospatial services, showcasing adaptability and creative solutions.
- f) Linked to project thematic: CDAU aligns with the Interreg program's thematic focus on data, open data, and the digital economy. It supports the twin transition by enhancing the quality standards of public services and facilitating business activities through reliable geographic information
