

Interreg Europe Policy Learning Platform: urban challenges for sustainable mobility

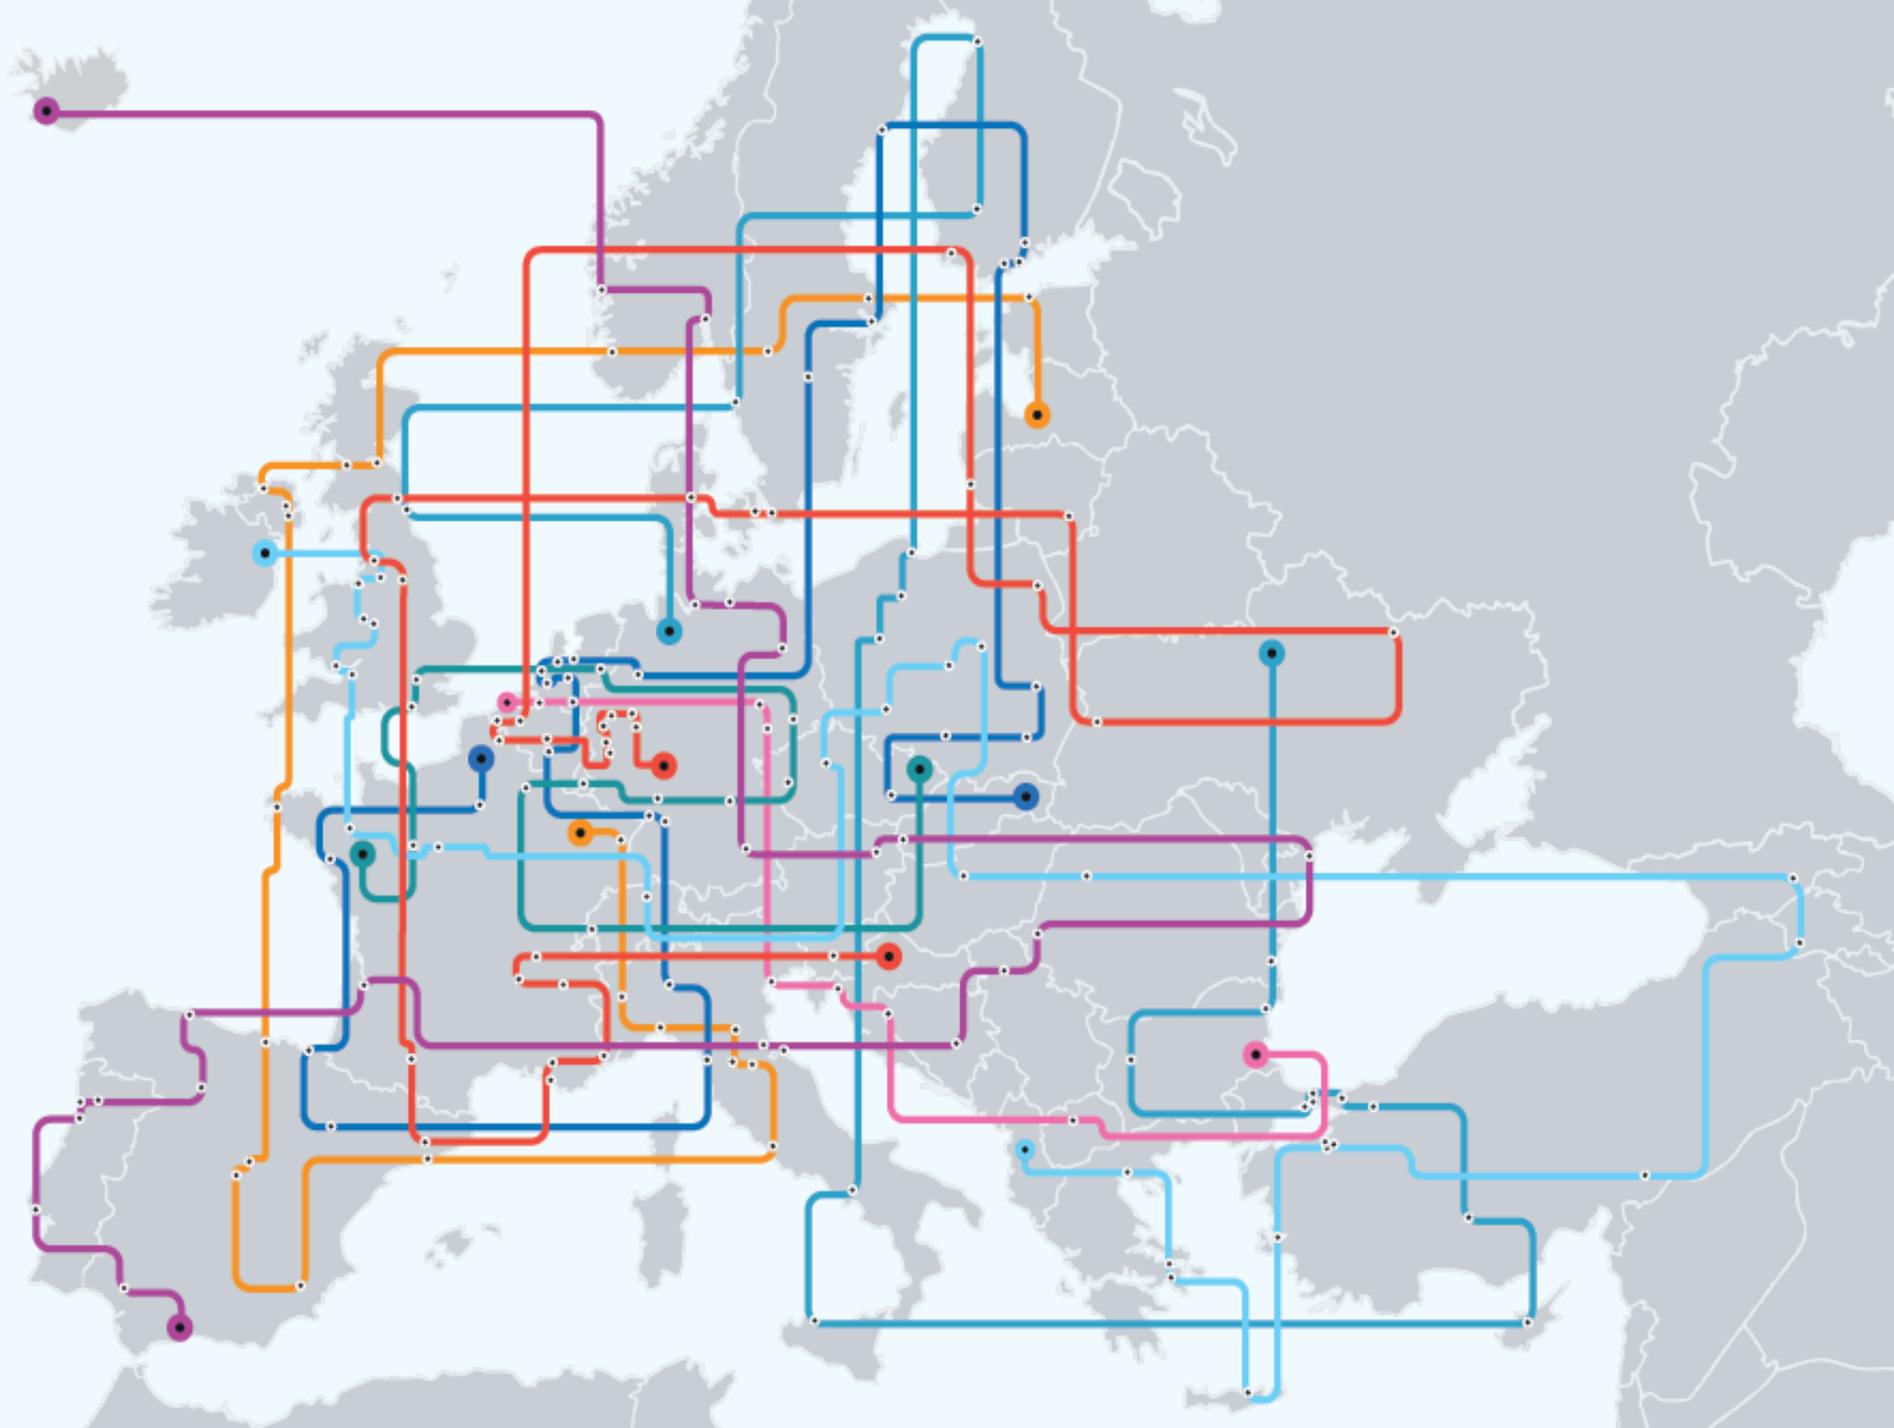

Thomas Willson, Policy Advisor & Project Coordinator

Brussels, 26/11/19

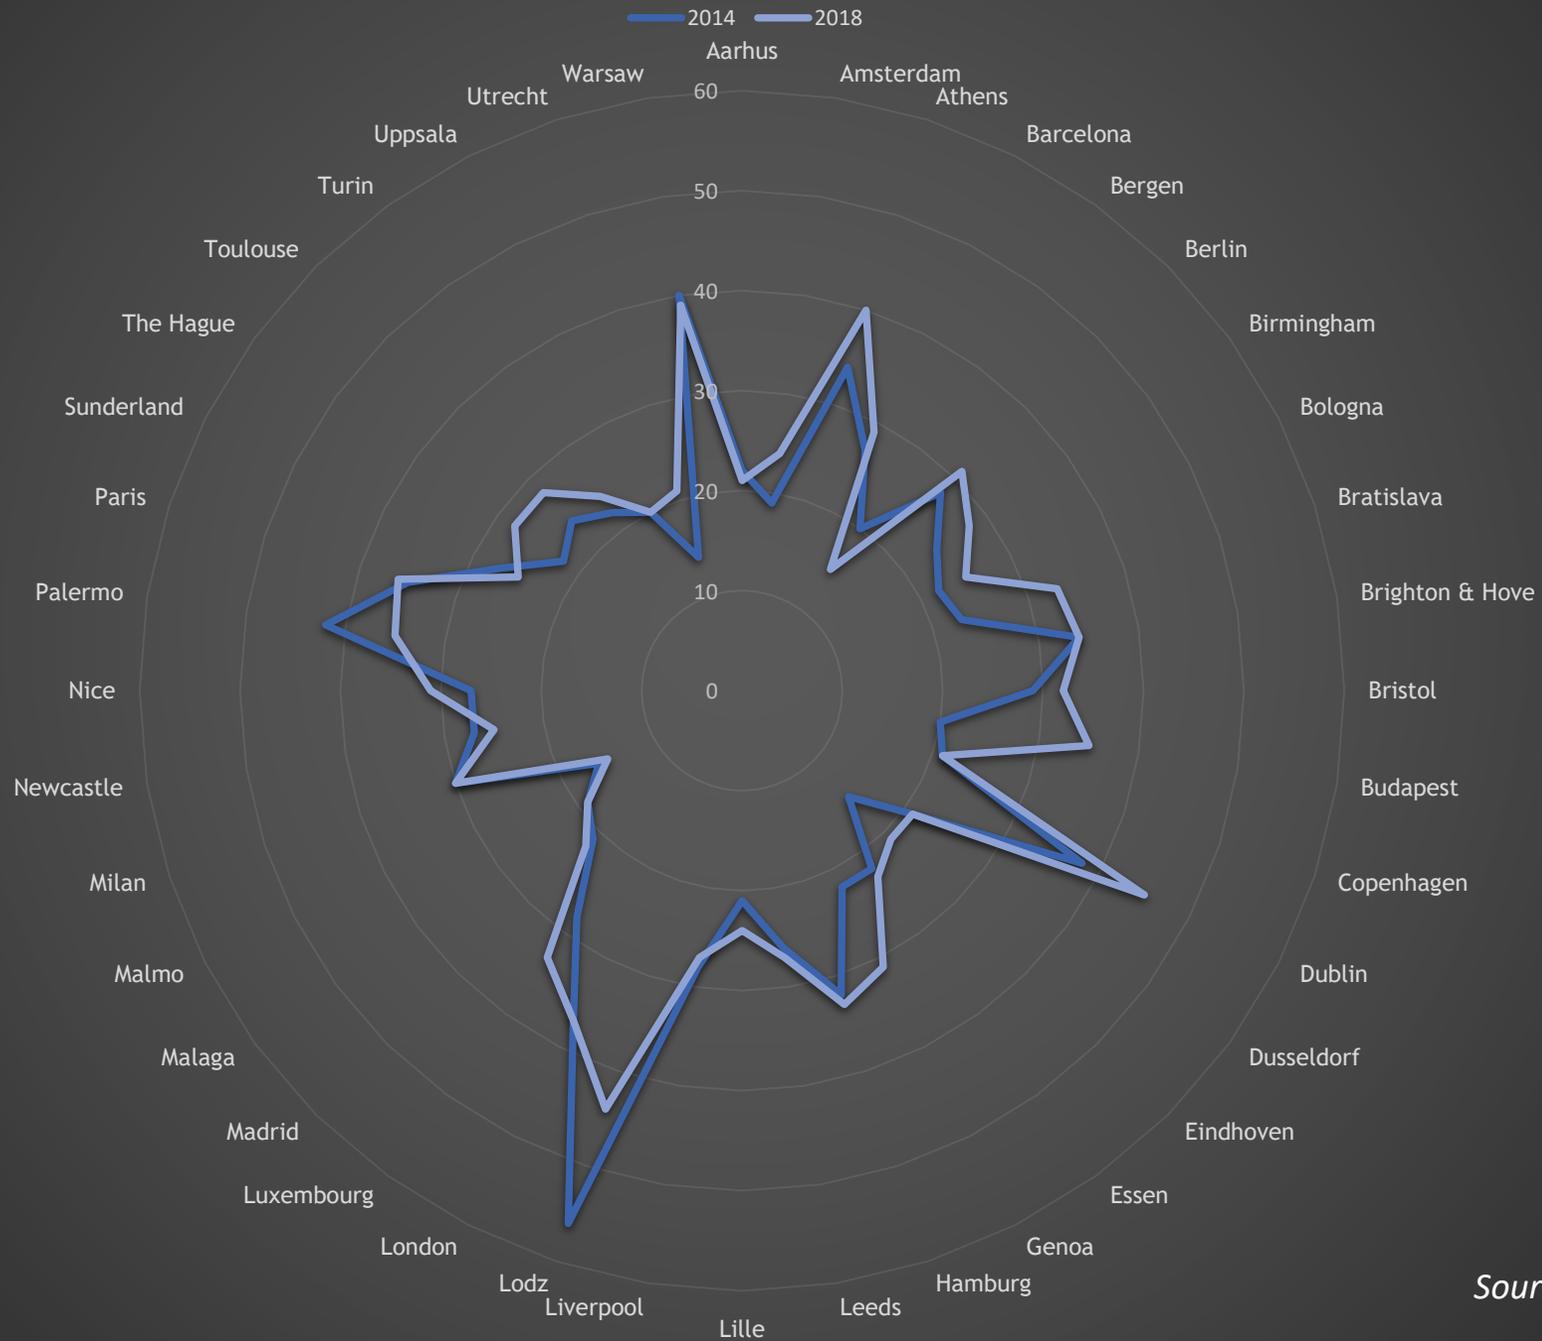

OVER
140 OF EUROPE'S
MAJOR
39 CITIES
COUNTRIES

Evolution of congestion in major European cities 2014-2018

Congestion

Approx. EUR 100bn cost per annum or ~1% of EU's GDP from urban transport

Source: TomTom Congestion Index

Evolution congestion Eastern European cities

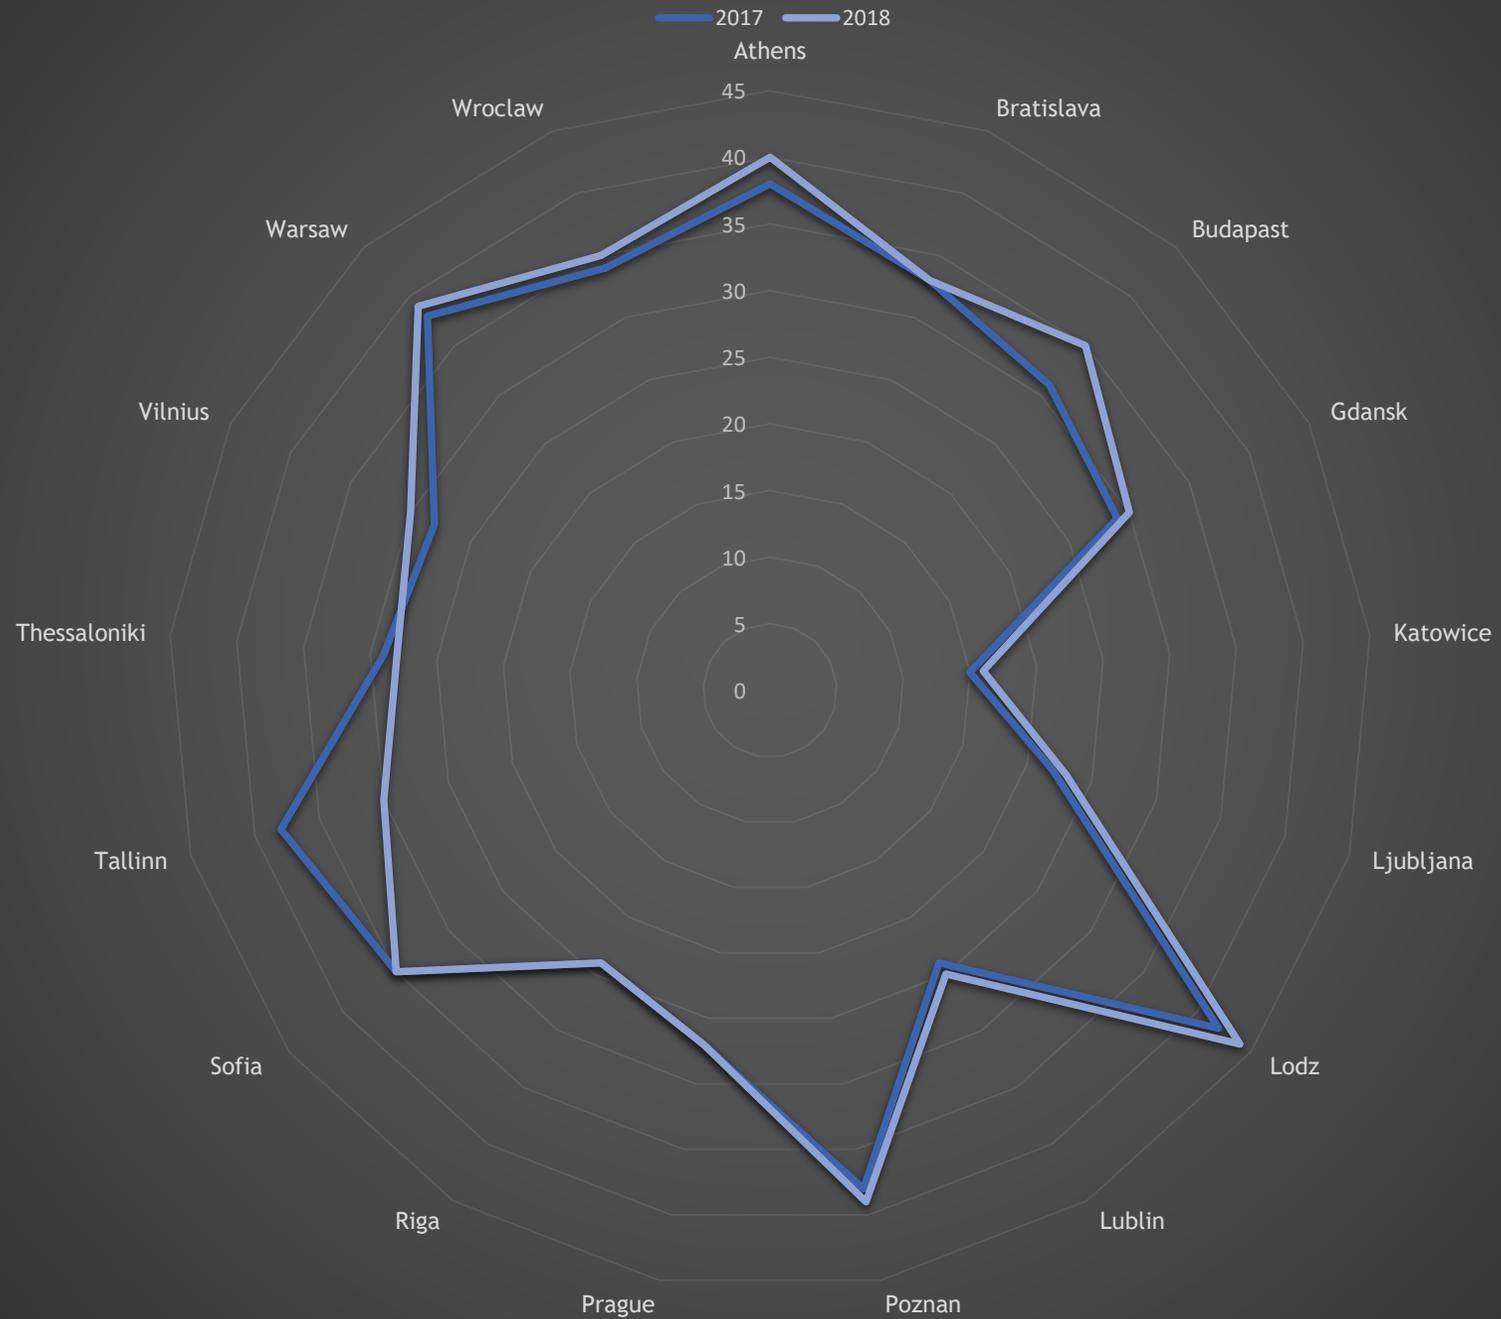

Figure 2.

Progress in reducing in the number of reported road deaths on urban roads, rural non-motorway roads and motorways in 27 EU countries for which data are available. SK is excluded from the EU average due to insufficient data.

Traffic accidents

25,300 fatalities and
135,000 seriously injured
37% of these occur in
urban areas

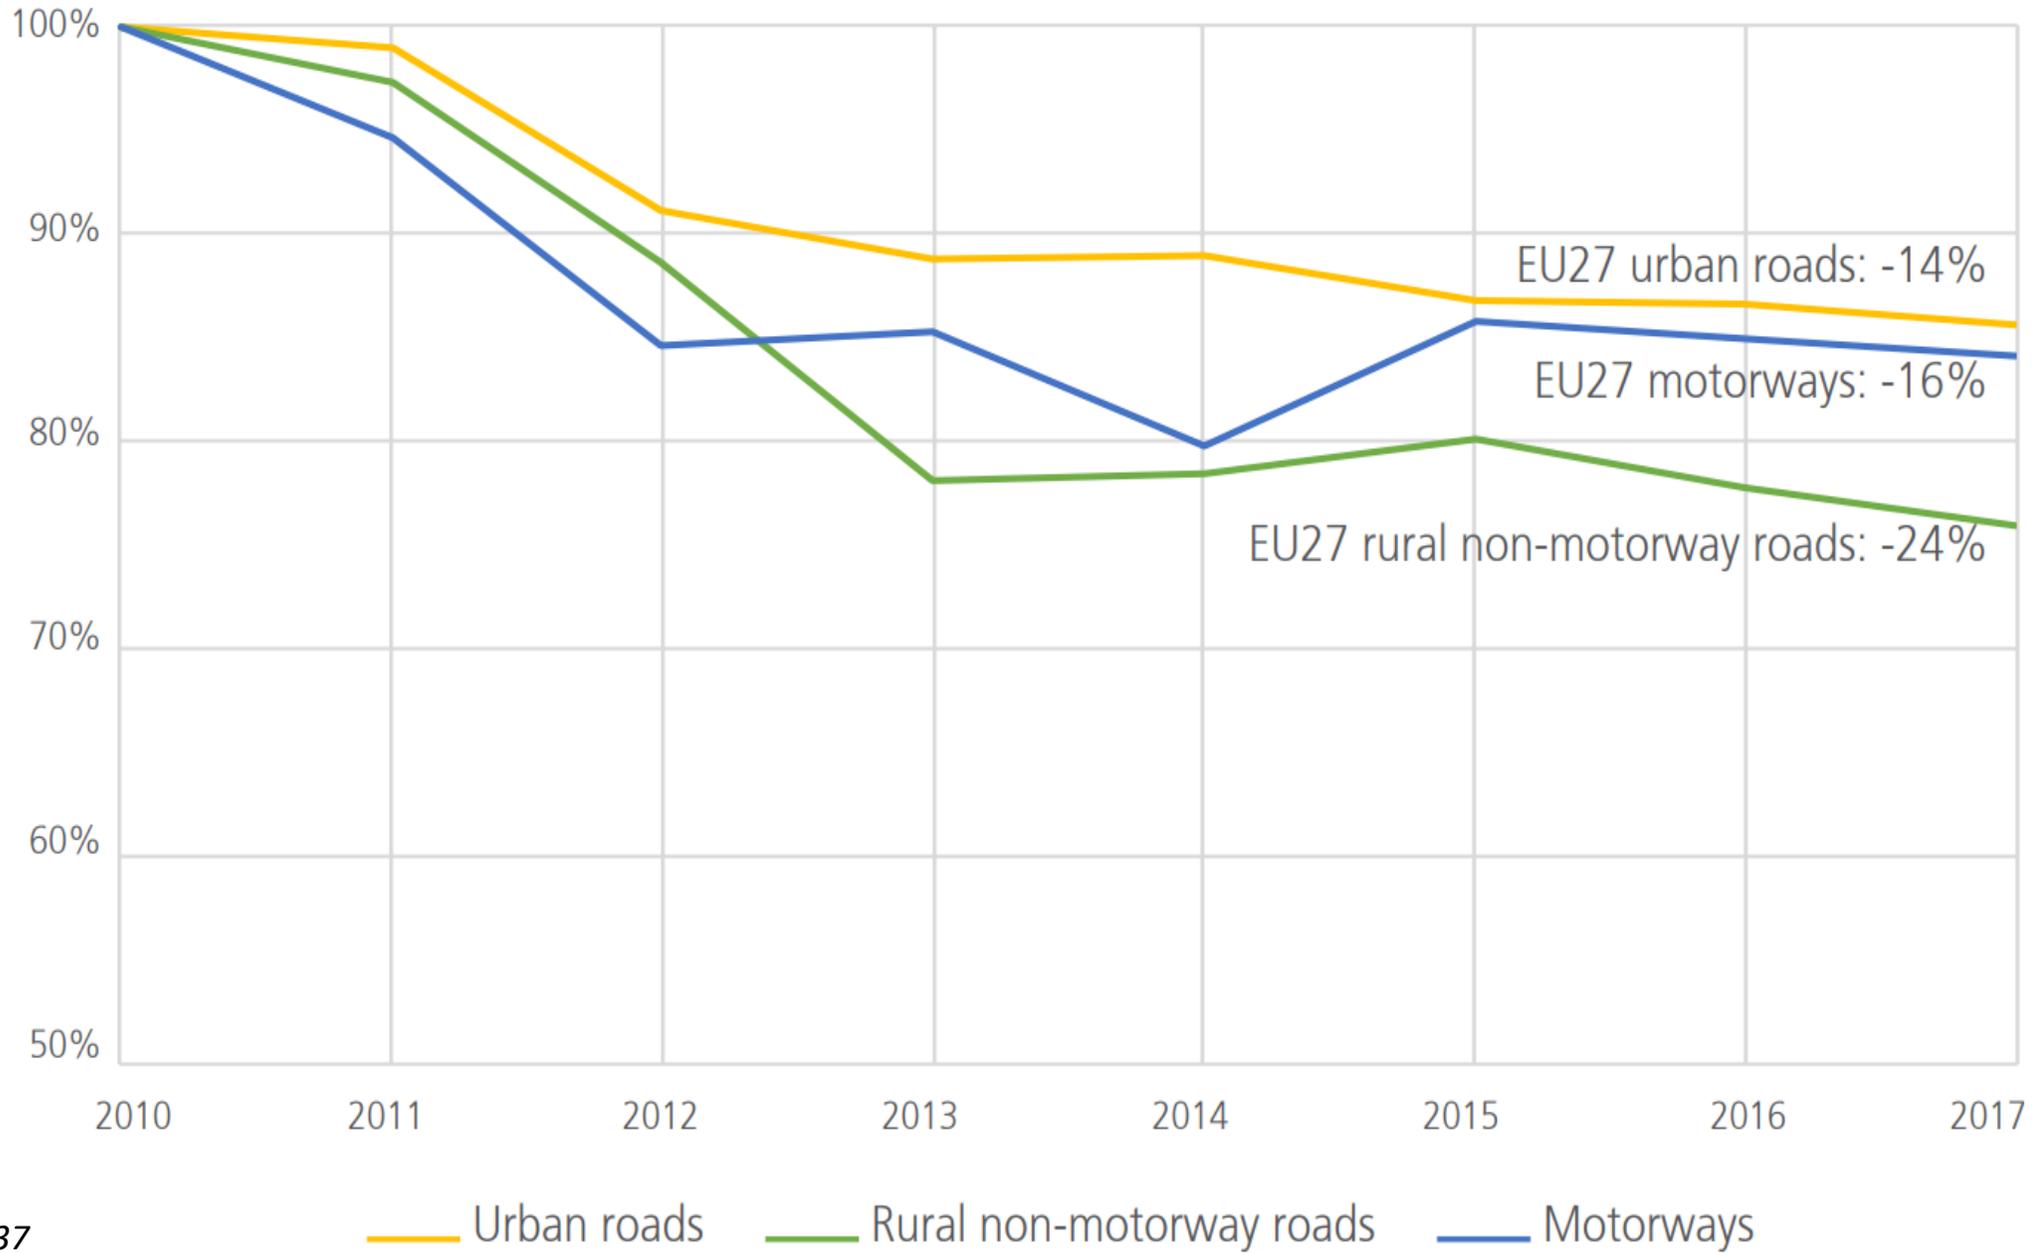

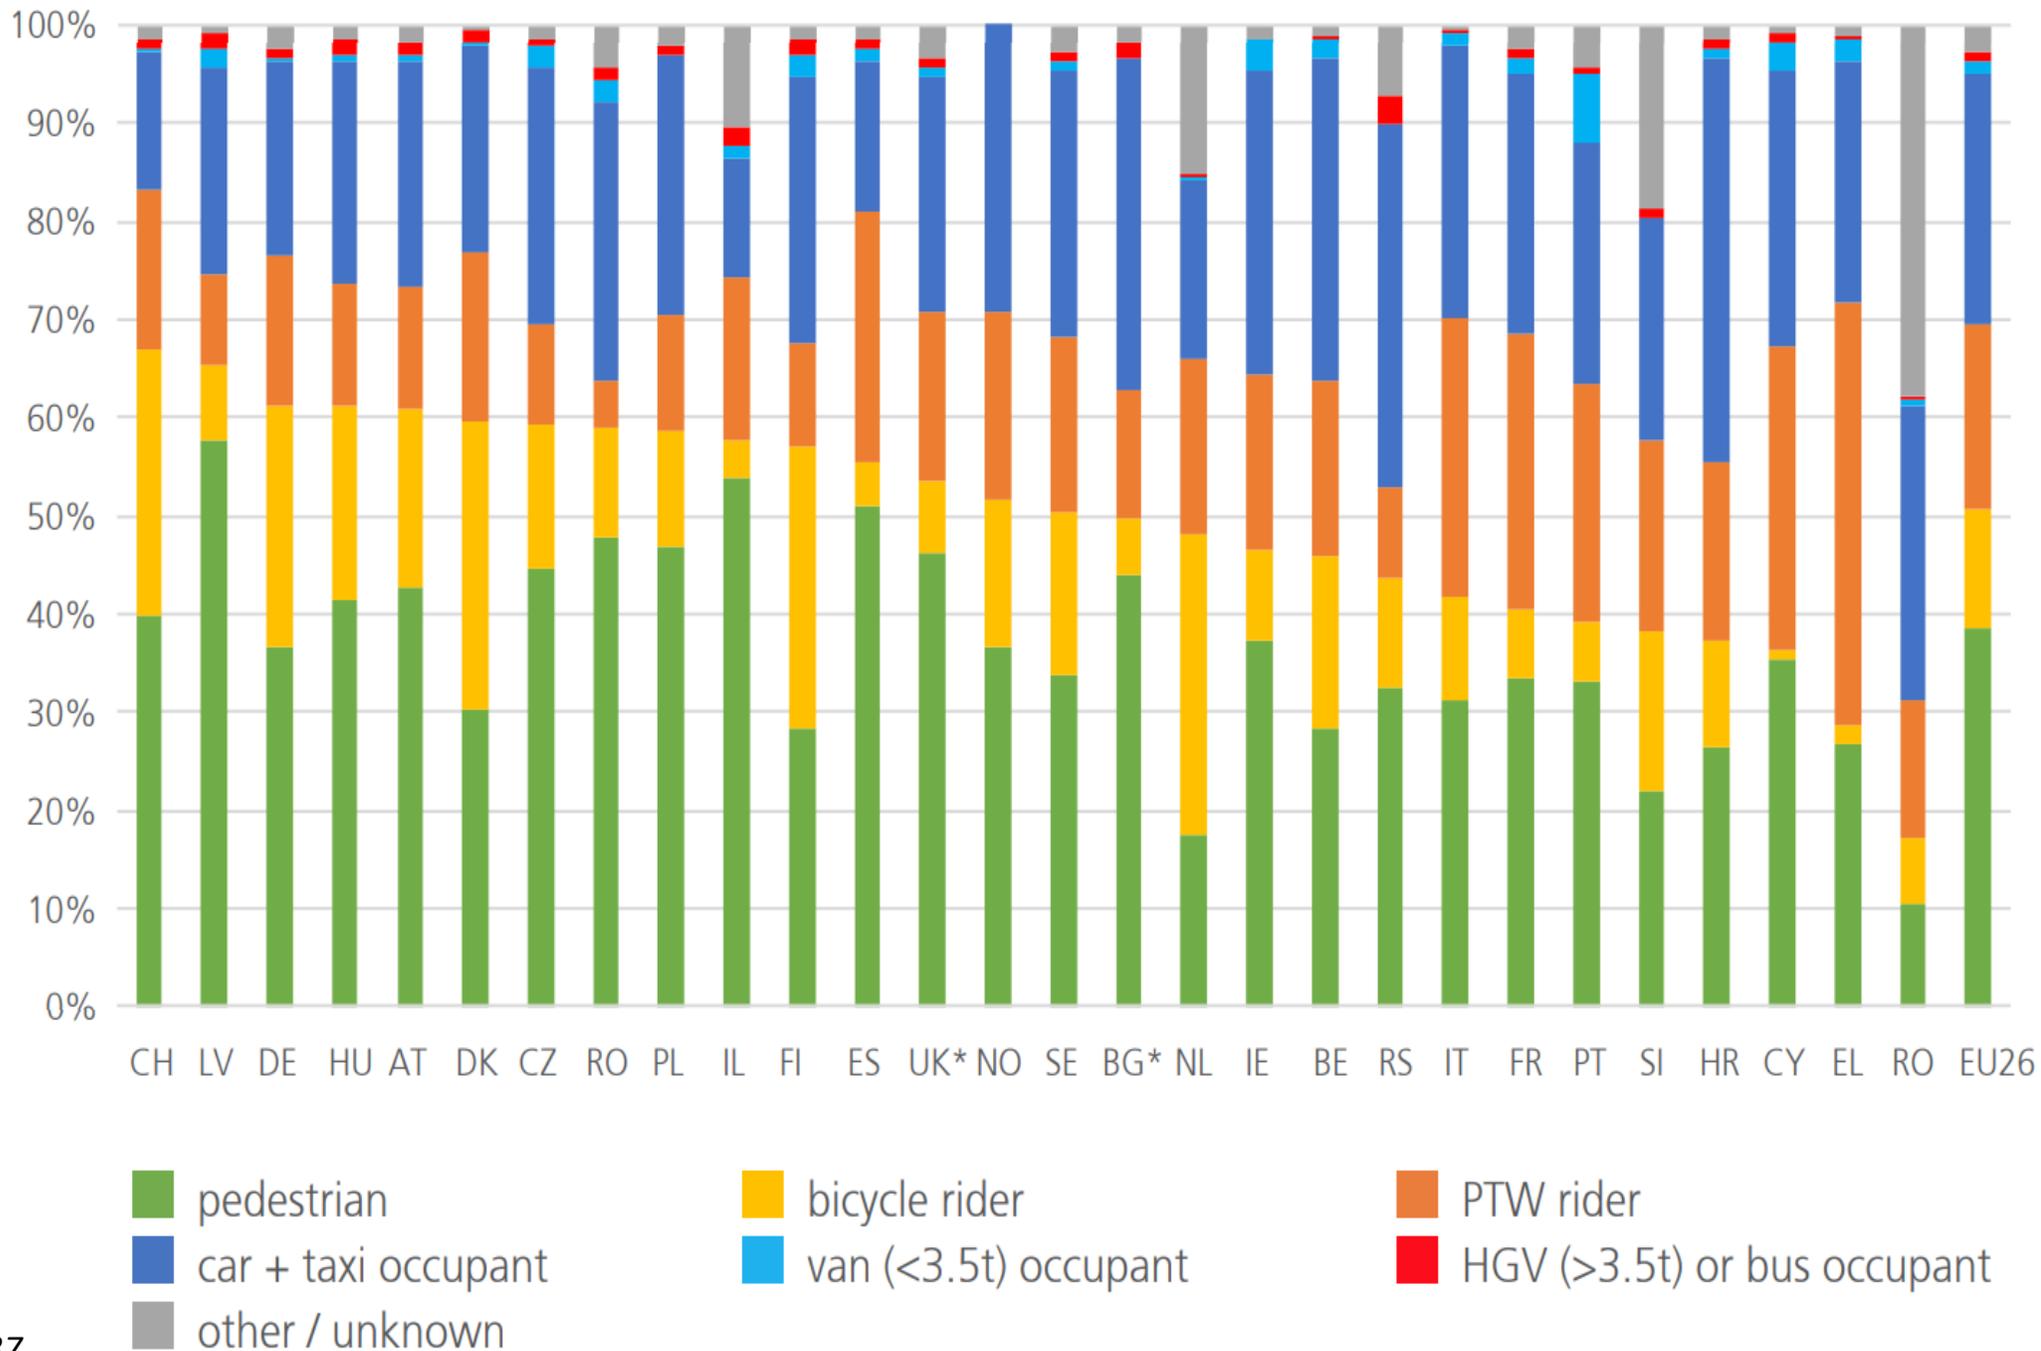

Figure 8.

Proportion of reported road deaths on urban roads by road user group, average years 2015-2017. Countries are ranked based on the proportion of pedestrian and cyclist deaths.

BG* – 2015;
 UK* - 2015-2016.
 EE, LU and MT are excluded from the figure due to relatively small numbers of road deaths. SK is excluded from the figure as the data are not available.

The **NOISE** Observation & Information Service for Europe

Roads

Road traffic is the main source of environmental NOISE in Europe.

NOISE levels from roads that exceed 55dB L_{den} affect an estimated one in four people in Europe. This map shows the numbers of people exposed to road traffic NOISE levels above this threshold, designed to indicate 'annoyance', during the average **DAY** period.

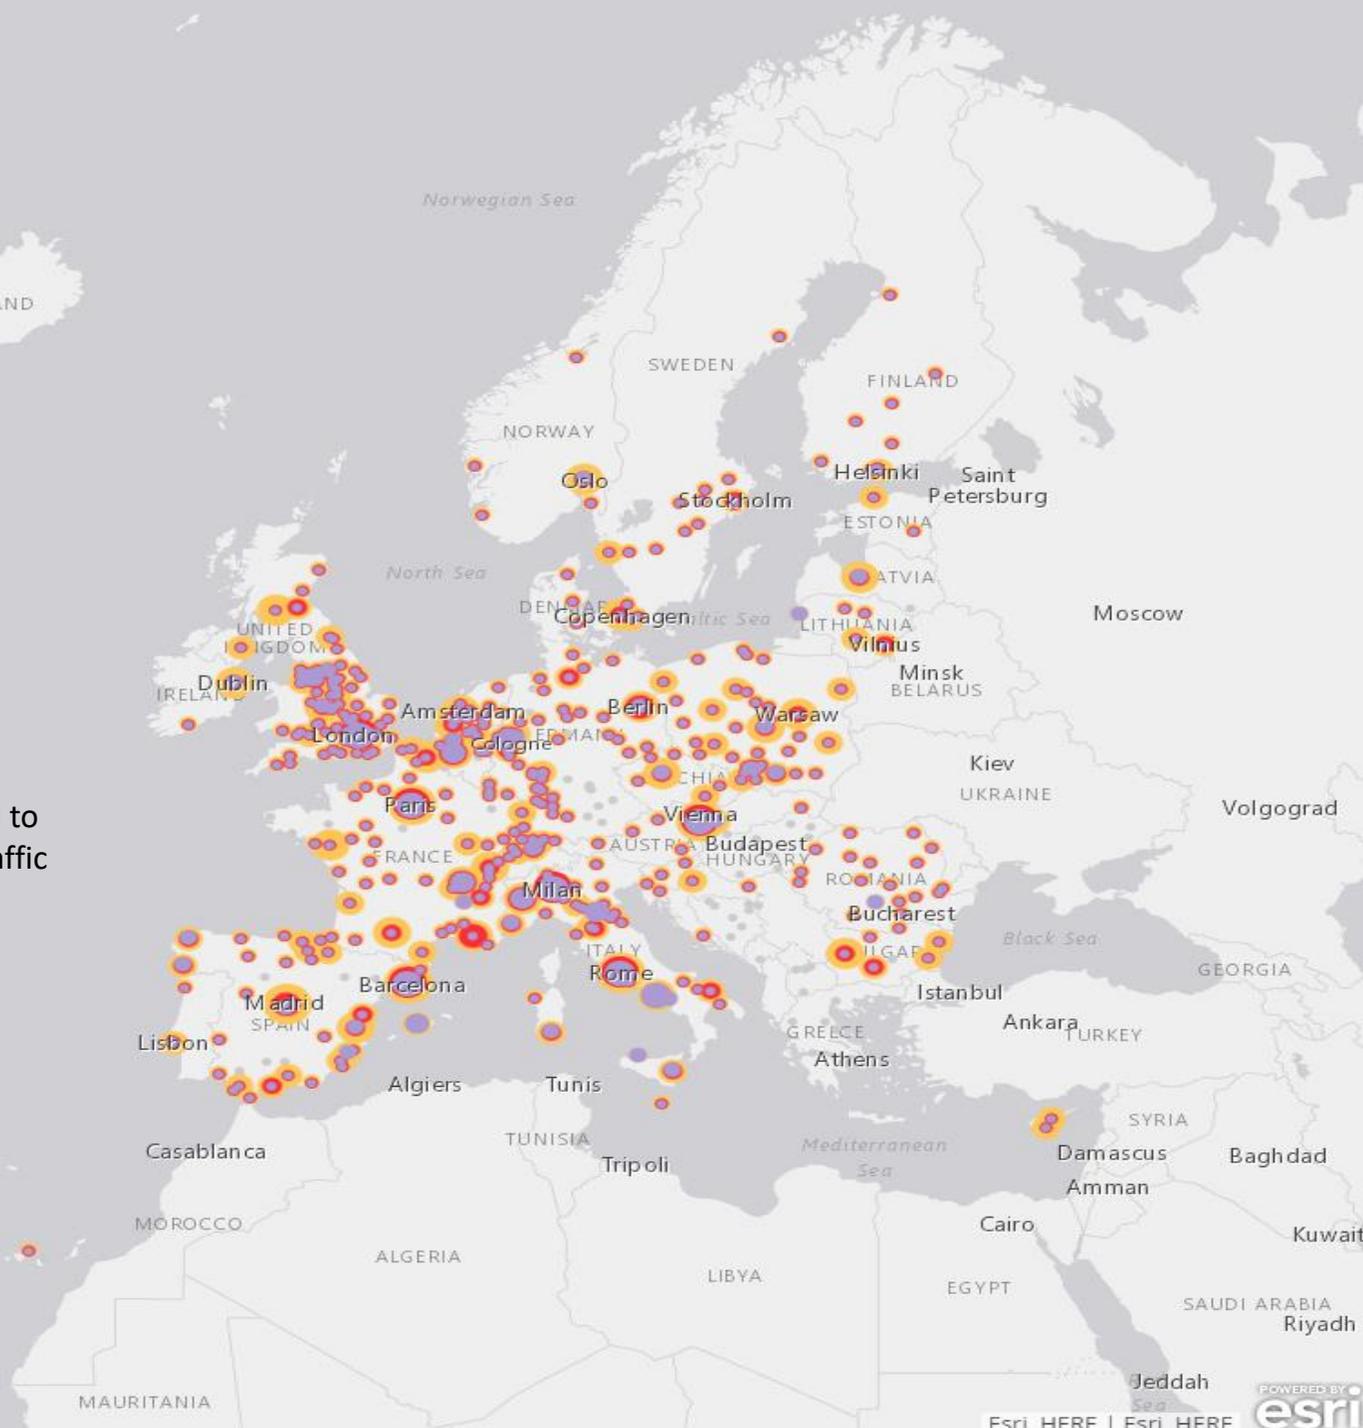

You may also view the map for exposure to road traffic NOISE exceeding the **NIGHT** 'sleep disturbance' threshold. Around one in six people are exposed to night time levels of road traffic NOISE that exceed 50dB L_{night} .

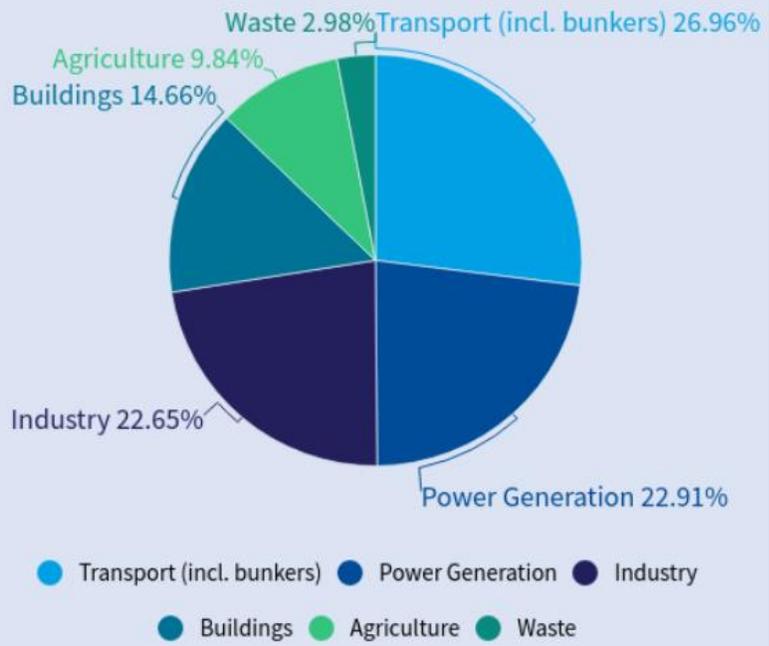

Zoom in to view noise contour maps

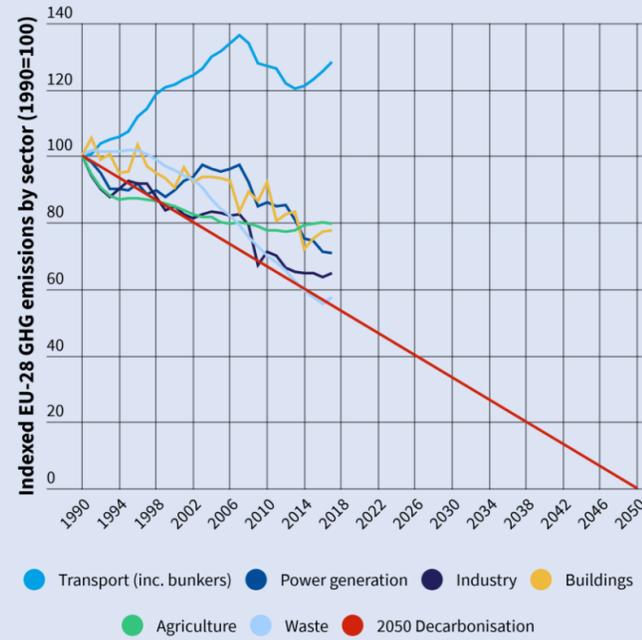

Noise

62% of major city populations exposed to long-term average traffic noise above 55db

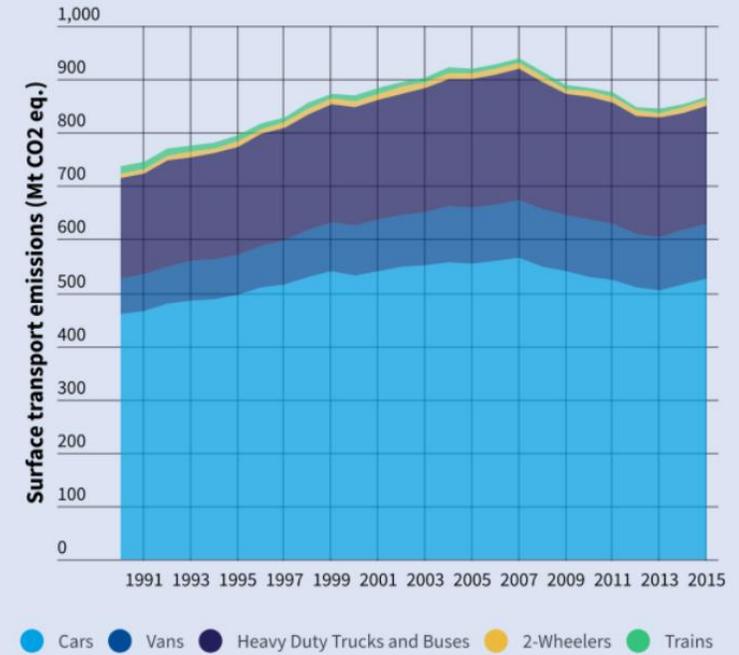

Largest source of emissions

Rising emissions

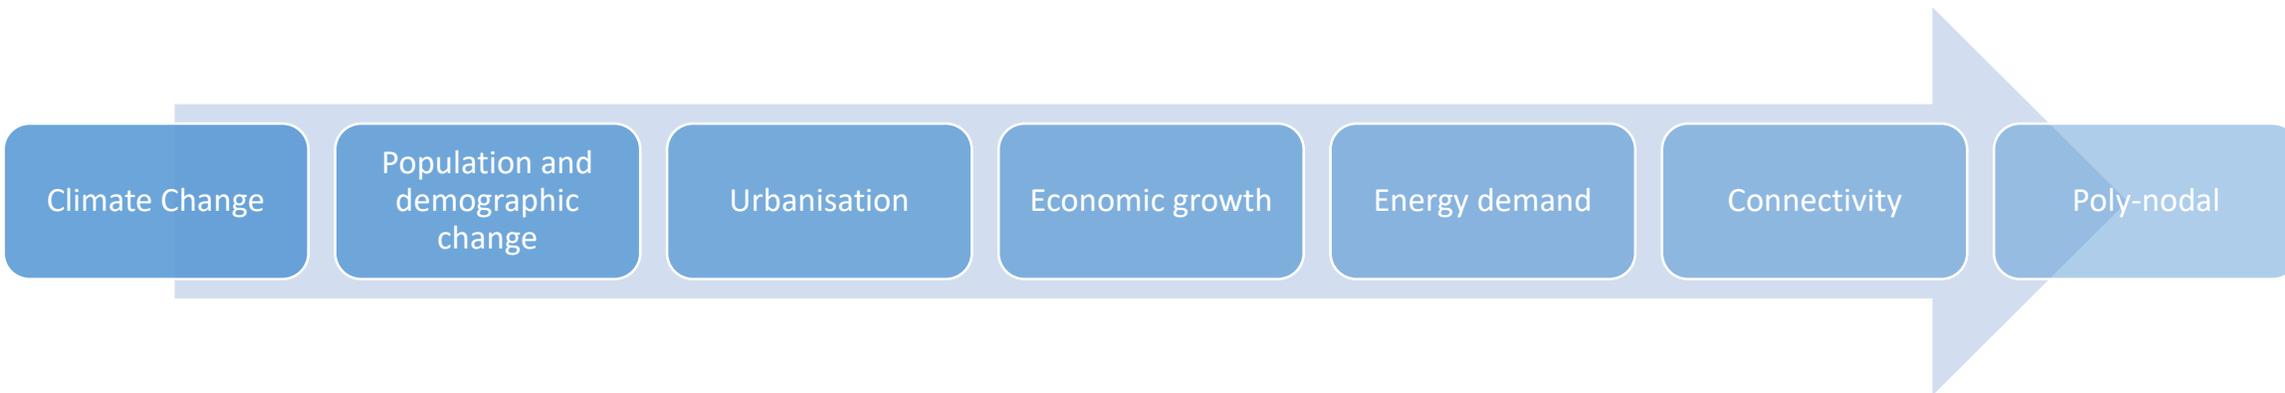

Passenger cars dominate

Table ES.1 Percentage of the urban population in the EU-28 exposed to air pollutant concentrations above certain EU and WHO reference concentrations (minimum and maximum observed between 2015 and 2017)

Pollutant	EU reference value (a)	Urban population exposure (%)	WHO AQG (a)	Exposure estimate (%)
PM ₁₀	Day (50)	13-19	Year (20)	42-52
PM _{2.5}	Year (25)	6-8	Year (10)	74-81
O ₃	8-hour (120)	12-29	8-hour (100)	95-98
NO ₂	Year (40)	7-8	Year (40)	7-8
BaP	Year (1)	17-20	Year (0.12) RL	83-90
SO ₂	Day (125)	< 1	Day (20)	21-31

Notes: The reference concentrations include EU limit or target values, WHO AQGs and an estimated reference level (RL).

Far more will live in cities of under 1 million, followed by those between 1 and 5 million.

Humanity is entering adulthood.

By 2030, the number of devices connected to the internet will have reached 125 billion, up from 27 billion in 2017.

AUTOMATION

CONNECTIVITY

DECARBONISATION

SHARING

invest in what?

economy

energy use and emissions

how to get around?

employment and skills

urban development

where to live?

what education or career?

sustainability of material supply

social **fairness**

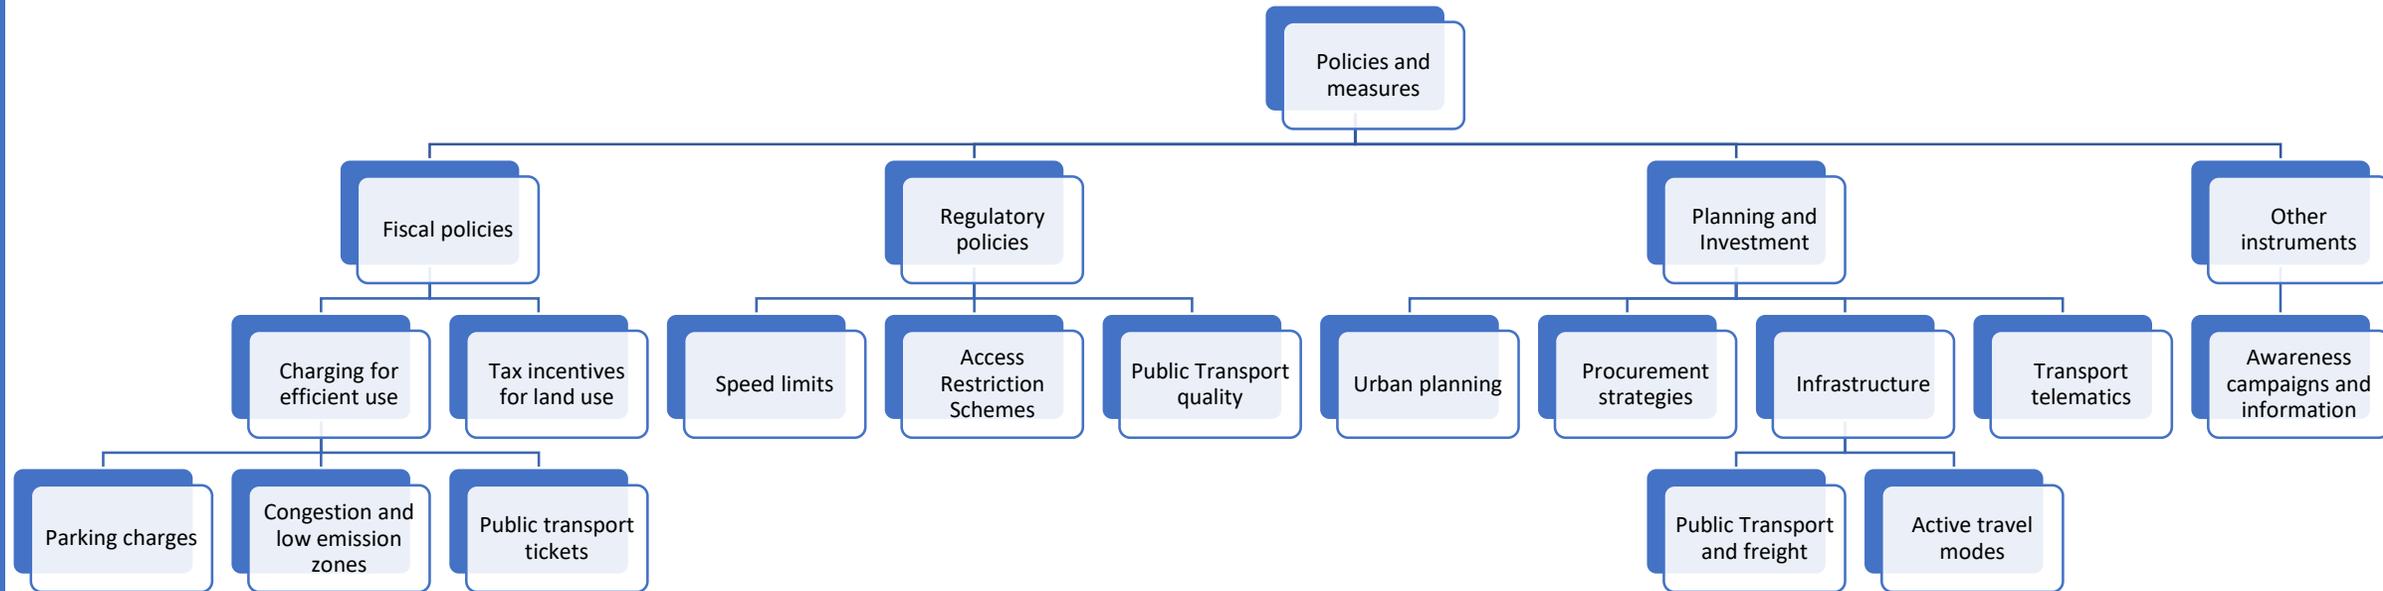

will there be enough of it?

inclusive enough?

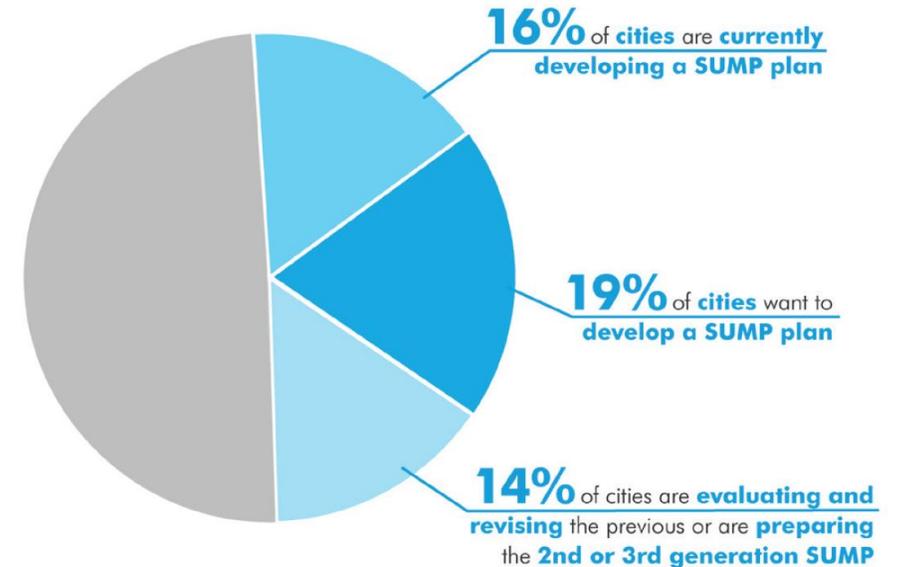

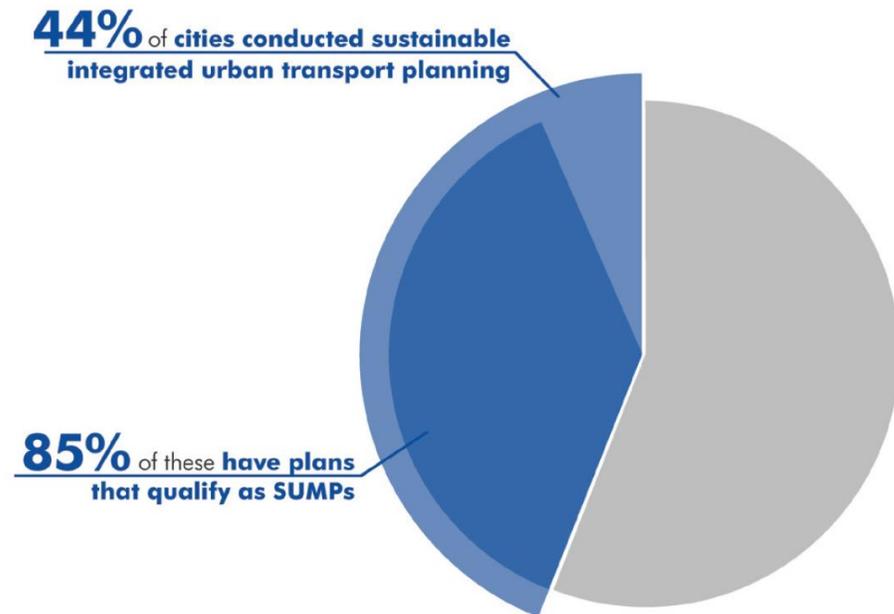

City authority mobility policy and measures

Sustainable Urban Mobility Plans

Integrated, strategic, long-term transport plan with **clear goals and monitoring**, for better **accessibility**, and **quality of life** for the functional **urban area**

The Path to
Sustainable
Urban Mobility

- Road transport emissions
- Alternative fuels infrastructure
- Shipping and aviation

- Sustainable modal shift
- Urban vehicle access regulations
- Road safety and active mobility
- Freight and logistics

- New mobility services
- Cooperative intelligent transport systems
- Automated vehicles
